Windshields & LED Headlamps

A. QUICK-RELEASE SUPER SPORT WINDSHIELD

Reduces the pounding of wind and shower of bugs but keeps the wind-in-the-hair feeling. Ideal for a cool morning ride, the sleek profile of the Super Sport Windshield hugs the front headlamp for a sporty look. The windshield mounts to the fork tubes with elegant die-cast lever locking clamps, so the windshield does not require any "leave-behind" docking hardware. You get quick on-and-off convenience and a clean, custom look. No tools are required and the kit includes everything needed to install the windshield.

57400192 Light Smoke.
Fits '15-later XG models (except XG750A). Installation requires removal of Original Equipment headlamp visor. Models equipped with a front mounted license plate require separate purchase of License Plate Bracket P/N 67900227. Windshield dimensions: Overall height 25.0"; width – 20.1".

B. DAYMAKER® LED HEADLAMPS

Cut through the night. Harley-Davidson® LED Lamps are brighter and whiter in color and provide a superior light pattern over standard incandescent lamps. Compared to the yellow light of a traditional halogen bulb, the LED lamp produces a "Daylight Color Impression" that appears more natural to the user. Headlamps feature horizontal "D-shaped" lenses that focus light into a pool in front of the motorcycle and separate high beam and low beam projector lenses that provide a focused beam of light ahead. Lamps are available in your choice of brilliant chrome or gloss black background to match your styling direction. The solid-state LEDs are designed for long life and the shock- and vibration-resistant lamp assembly mounts into existing light housings. Installation is quick and easy and the plug-in lamps connect to the factory headlamp wiring. The LED lamps are DOT and ECE compliant.

Fits '15-later XG models.

C. CAFÉ SOLO SEAT

D. REACH SEAT

E. TALLBOY SEAT

C. CAFÉ SOLO SEAT

There's something about the placement of the rider that makes the Cafe Solo Seat special. The one-up design and the high back pad hold the rider in place and provide a direct connection to the bike. You sit "in" the bike and your hands and feet reach naturally to the controls. The low-slung pad, narrow nose and the tapered tail enhance the bike's sporting profile and pays homage to the heritage of the iconic Café Racer style.

52000168
Fits '15-later XG models (except XG750A). Seat width 11.25".

D. REACH® SEAT

Designed specifically for riders requiring a close to the bar riding position, this Reach® Seat is shaped to place the rider in a comfortable and confident relationship to the hand and foot controls. The seat moves the rider approximately 1.5" lower and 1.25" forward and the 1.25" slimmer front profile brings the legs closer together for an easier reach to the ground at a stop. The Reach Seat features a stepped profile that keeps the rider from sliding back during acceleration.

52000123
Fits '15-later XG models (except XG750A). Seat width 10.25"; passenger pillion width 6.75".

E. TALLBOY® SEAT

The correct riding position can help a tall rider sit comfortably on the bike, and avoid leg cramps and back strain during a long day in the saddle. For riders with a longer inseam, a Tallboy® Seat will put you on the road to fatigue-free riding. Designed to move the rider 1.25" up and 2.5" back from the stock seating position, a Tallboy Seat can eliminate the "knees-high" riding position and effectively places the body for a natural arm and leg reach to the controls.

52000124
Fits '15-later XG models (except XG750A). Seat width 10.5"; passenger pillion width 7.5".

A. REACH® RIDER SEAT – STREET ROD® MODEL
Fit and style in one. Styled to match the Original Equipment passenger pillion, this low-profile seat provides a slammed, sporting custom look to the Street Rod® model. And because this Reach® Rider Seat drops the rider deeper into the bike, it minimizes the leg stretch to the ground at a stop or while parking the bike.

Measurements as compared to other seating options:
- Stock Street Rod model seat – 1.5" lower.

52000375
Fits '17-later XG750A models. Seat width 10.75"

B. CIRCULATOR SEAT AND BACKREST PADS
Keep comfortable on your next long ride. These breathable Circulator Seat Pads feature 3D construction that promotes air movement and reduces heat build-up where the rider's body touches the seat or backrest. Designed to keep the rider cool by reducing the perspiration build-up between you and the seating surface, the Circulator Pad can be installed and removed in seconds for easy cleaning.

Fits '15-later XG models.

51074-10	Medium Seat Pad.
51078-10	Passenger Pillion Pad.

C. TANK KNEE PAD KIT
These self-adhesive rubber knee pads provide a touch of old school style. The rich black rubber pads feature tapered ribs and a raised Bar & Shield logo to protect the surfaces where your legs contact the tank. The compact pads measure 7.0" by 2.75", and are flexible enough to fit many tank profiles. Sold in matched pairs.

57300065
Fits fuel tanks on many Street™, Sportster®, Dyna® and Softail® models. May cover a portion of fuel tank graphics. Check appearance before adhering to tank.

D. BUNGEE BARS – STREET ROD MODEL
Secure soft luggage or spare helmet to the passenger pillion. Bungee Bar System provides a solid anchor point for cords or cargo net hooks and protects the fender finish from damage. Black scratch-resistant zinc-plated steel bars feature formed detents on each side to prevent sliding of bungee hooks. Kit includes left and right bars shockmount tiedowns and all required mounting hardware.

50300123
Fits '17-later XG750A models.

A. REACH RIDER SEAT – STREET ROD MODEL

B. CIRCULATOR SEAT PAD (RIDER SHOWN)

C. TANK KNEE PAD KIT

D. BUNGEE BARS – STREET ROD MODEL

52300285
Fits '15-later XG models (except XG750A).

***WARNING:** Do not use this rack as a seat. Do not exceed the fender rack weight capacity. Using as seat or exceeding this capacity could cause handling problems which could result in loss of control and death or serious injury.

A. THROW-OVER SADDLEBAGS
Ballastic Nylon throw over saddlebags offer convenient storage and can be easily removed for transport. 3M™ Scotchlite™ reflective piping adds additional visibility and top mount zippers offer quick easy access to items. Center yoke allows for two-up riding and can double as a shoulder strap when its time to carry the bags. Quick mount system allows rider to attach and detach saddlebags quickly. Kit includes saddlebag supports.

90200906
Fits '15-later XG models (except XG750A).

B. PHONE CARRIER MOUNT
Designed to place a smartphone or music device close at hand, this ball-tipped mount is center-mounted to the handlebar clamp and provides a direct view just below the speedometer. When combined with the Universal Phone Carrier P/N 76000549 or Water Resistant Carriers P/N 76000576, 76000605 or 76000670, the ball-shaped mount provides a wide range of adjustability for the ideal viewing angle.

76000758
Fits '15-later XG models. Requires the separate purchase of an H-D™ Smart Phone Carrier.

C. MUSIC PLAYER TANK POUCH
This portable music system pouch is designed for motorcycle use. The neoprene jacket offers hard-core protection for your portable music device, while the built-in magnets hold the pouch securely to the fuel tank. The clear play-through window permits touch-screen control and the anti-skid interior allows the pouch to accommodate players of various sizes. The clamshell design makes inserting your player into the pouch quick and easy and the double zipper allows for headphone and output cables to exit the pouch at any point on top, bottom or one side of the pouch. Works well with many MP3 and other personal music players, but should not be used with hard-disk memory players. Window measurement: 2.25" W x 4.0" H.

76000193
Fits models with steel fuel tanks or airbox covers.

D. ENGINE GUARD – CHROME

D. ENGINE GUARD – GLOSS BLACK

D. ENGINE GUARD*

The unique soft curve shape adds style to function. The two-piece Engine Guard is designed to complement the lines of the Harley-Davidson Street® motorcycle and the choice of finishes adds the perfect custom touch. Add your choice of Engine Guard Mounted Highway Pegs (sold separately) to change your foot position on a long ride.

Fits '15-later XG models.

49000047B Gloss Black.

49000015B Chrome.

E. UNIVERSAL MOUNT HELMET LOCK

To limit grab-and-run theft, just unlock the hinged clasp, hang your helmet by its strap and relock with the included key. Your helmet is held securely in place. In addition, hanging your helmet reduces the risk of impact damage if the helmet slipped off the seat or the handlebar. Designed to be installed to .875" to 1.25" diameter tubing engine guards, saddlebag guards and frame tubes, the Helmet Lock is secured to the bike with tamper-proof hardware that cannot be easily removed. Note: Do not use lock when vehicle is in motion. Helmet Lock should only be used when motorcycle is parked and locked. Duplicate keys are not available.

45732-86

Fits all models. VRSC™, '15-later XG and '04-later XL and XR models require installation of engine guard.

E. UNIVERSAL MOUNT HELMET LOCK

F. CENTER STAND

F. CENTER STAND

Lifting your bike upright and off the side stand is ideal for cleaning and servicing and reduces the space required for parking – handy where space is at a premium in a crowded garage, a small parking spot or at a ride-in bike show. The robust gloss black painted center stand attaches directly to the frame and does not reduce the lean angle. Kit includes gloss black center stand, mounting brackets and all necessary installation hardware.

92900014

Fits '15-later XG models.

F. CENTER STAND

***WARNING:** These guards may provide limited leg and cosmetic vehicle protection under unique circumstances (fall over while stopped, very low speed slide). They are not made nor intended to provide protection from bodily injury in a collision with another vehicle or any other object.

CAFÉ CUSTOM

A Café bike starts with a “less-is-more” philosophy. Low-slung bars, rear-set foot controls and a narrow profile define the style. And when stripped of all “unnecessary” accessories, these unburdened motorcycles are lighter, faster and have a harder-edged, rebellious look that reflects the rider’s bare-knuckle attitude.

This Iron 883™ model is caffeine fueled, fully wired, and ready to carve up back roads. Equipped with a suite of Café Custom components and a Screamin’ Eagle® fully adjustable suspension, this aggressive riding profile puts you firmly in control.

1 CLIP-ON BARS

Low, narrow clip-on handlebars enable the rider to "tuck in," helping to reduce wind resistance and improve control.

2 BAR END MIRRORS

Bar End Mirrors provide a clean, streamlined look, and the outside-the-grip location eases the view past your hands and shoulders.

3 REAR SET CONTROLS

For the ultimate in aggressive riding posture, Rear Set Foot Controls reposition your feet to encourage a tank-hugging profile.

4 CAFÉ TAIL SECTION

This fast-back solo seat provides the perfect lay-down aggressive riding posture for splitting lanes or carving corners.

A. CAFÉ CUSTOM TAIL SECTION

Create your own link to the Sportster®-based racing and performance bikes of the '60s and '70s. This fast-back solo seat and tail section mirrors the look and feel of the iconic 1977-78 Harley-Davidson® XLCR Café Racer model, and re-imagines the style for the modern era. Ideal for use with Clip-On or Sportster Clubman Handlebars and mid- or rear-set foot controls, this seat provides the perfect lay-down aggressive riding posture for splitting lanes or carving corners. The seat's upturned tail and longer nose positions the solo rider closer to the tank for better weight balance, quicker steering and added front-end feedback. The Tail Section is a true bolt-on design that wraps the fender struts, so unlike other café bike kits, there is no cutting, welding or frame modifications required. Installation is reversible – you can easily return your bike to the stock look. The complete kit features a sweeping composite tail section with a steel inner support, a deep solo bucket seat with backstop pad, and all necessary installation hardware.

Fits '10-later XL883N, XL1200CX, XL1200N, XL1200NS, XL1200V, XL1200X and XL1200XS models. Separate purchase of License Plate Bracket Kit P/N 67900360 for Canada models or P/N 67900359 for HDI models is required.

This complete gloss black Rear Set Control Kit includes everything you need to move the brake and shift lever to the rear passenger position. ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control, and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

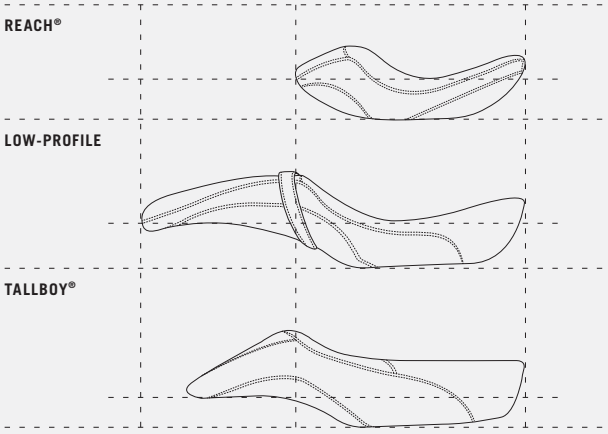

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid-Foot Controls, and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

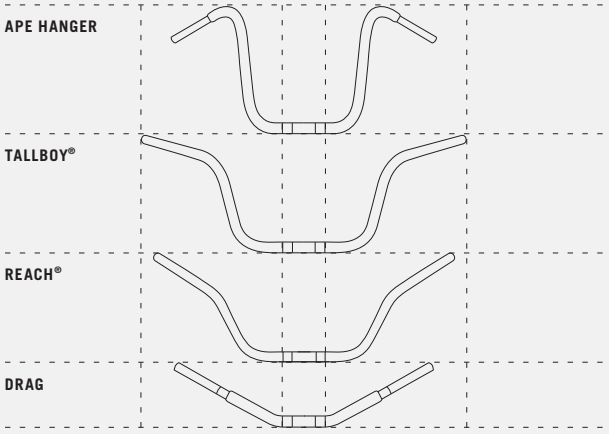

ESTABLISH YOUR POSITION AND FEEL

SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

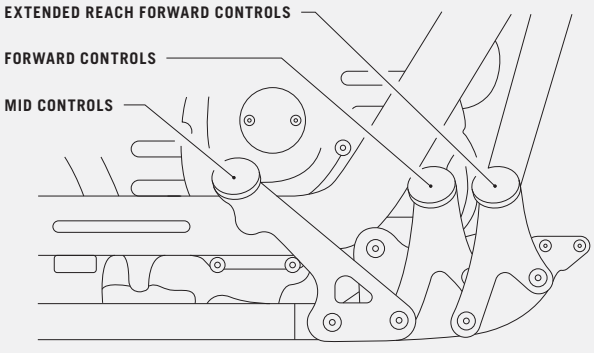

SEE PAGES 66-71

HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

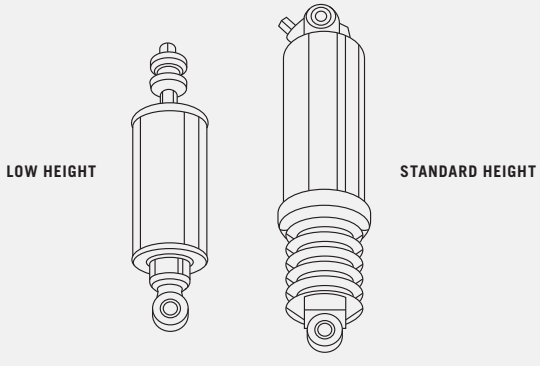

SEE PAGES 636-639

FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 89-92, 580-613

SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

SEE PAGES 87-88

A. SUPER REACH® SOLO SEAT

Get a little bit closer. Super Reach® forward position seats are designed to move riders with a shorter inseam even closer to the controls and to bring the legs closer together so that your feet rest firmly on the pavement. After hundreds of hours of on-road and ergonomic testing, the seat shape and foam density were selected as the ideal position for riders 5'-0" to 5'-4" tall. The Super Reach Seat moves the rider 1.5" closer to the controls compared to stock seat on XL883L model, and 2" closer and .5" lower compared to stock seat on XL1200C model. The nose is 1.0" narrower than the stock seat, and it is tastefully sculpted to look great with any size Sportster® fuel tank. The combination of premium textured and smooth vinyl surfaces and charcoal gray stitching and embroidered Bar & Shield logo really set the seat apart. For the ultimate solo touring setup, add the Quick Release Rider Backrest P/N 52300245.

The slightly bucketed rider seat offers lower back support and features a textured insert to prevent you from sliding around while riding.

PREMIUM ADJUSTABLE SUSPENSION

Your motorcycle's suspension defines the riding experience. Fast starts, smooth stops, and tight control in the corners are all part of the vehicle dynamics controlled by the tuning of the front forks and rear shocks. Screamin' Eagle® Fully Adjustable Suspension components let you dial-in the ride, whether you're cruising the highway, carving up a country road, or dodging city potholes.

1 COMPRESSION ADJUSTER

Fine tunes suspension to control the upward wheel movement when hitting a bump

Adjusts the speed at which the suspension compresses

Critical for balancing ride quality and suspension bottoming

2 REBOUND ADJUSTER

Fine tunes the downward wheel movement after riding over bumps or potholes

Adjusts the speed at which the suspension returns from extension

Critical for balancing ride quality and suspension bounce

3 PRELOAD ADJUSTER

Critical to setting the proper suspension travel to soak up large potholes and absorb large bumps

Adjusts for rider sag- the amount the suspension drops under the weight of the rider and cargo

4 PIGGYBACK RESERVOIR

Remote reservoir keeps the shock oil cooler to maintain damping performance

Internal bladder separates the oil from the nitrogen gas to reduce cavitation during aggressive riding

C. PERFORMANCE SUSPENSION KIT – XR1200

Maximize the canyon-carving ability of your XR1200 motorcycle with this complete Performance Suspension Kit. Fully-adjustable light-weight suspension system features Showa's new Big Piston Front fork (BPF) design. The BPF eliminates many of the internal components used in a cartridge-type fork, simplifying construction and resulting in lighter overall fork weight. The large-diameter of the BPF's internal piston allows a reduction in damping pressure, for better feedback and smoother action. This performance suspension kit also provides a very controlled feeling which leads to more rider confidence. The BPF's rebound and compression damping force settings are easily fine-tuned via two adjuster screws located on top of the fork bolts. The spring pre-load is adjusted via a M5 hex screw on the axle holders. The rear Showa® shocks feature 36mm pistons with piggyback nitrogen-charged reservoirs. The compression damping can be adjusted via a knob on top of the piggyback reservoir. The rebound is adjusted with a thumb wheel on the lower clevis. Rear spring pre-load is also adjustable on the shock for optimum 1G sag. The kit includes one set of Big Piston Front Forks and one set of rear shocks.

***WARNING:** Installation of any accessory suspension components may affect cornering clearance and jiffy stand operation. This could distract the rider, causing loss of control and death or serious injury.

A. PREMIUM RIDE SINGLE CARTRIDGE FORK KIT*

This Single Sided Cartridge Fork provides improved handling performance by keeping the tire in contact with the road surface. Tuned to work in concert with the Premium Emulsion Rear Shocks, the fork damping is controlled by a specifically calibrated piston and valve stack. Unlike typical orifice damping, the piston/valve system helps the cartridge fork achieve a linear damping force curve for consistent feel throughout the compression and extension of the front suspension. The cartridge allows the forks to react quickly to rough roads, inspiring rider confidence in sweeping corners. The compression piston provides excellent low speed damping for a better rider feel, and the rebound spring provides a smoother feel during topping. The cartridge fork resists bottoming and dive, and the triple rate spring and oil lock allows the forks to absorb bumps even under hard braking – giving the rider more control while resisting wheel hop. A perfect addition during the installation of chrome or gloss black lower fork sliders, the kit includes fork pipe, cartridge, fork bolts, main springs and oil seals.

45400091 Standard Height.
Fits '04-'15 XL883, XL883C, XL883R, XL1200R, and XL1200V and '04-'10 XL1200C models.

A. PREMIUM RIDE SINGLE CARTRIDGE FORK KIT (LOW PROFILE)

B. PREMIUM RIDE EMULSION SHOCKS*

Experience a comfortable and confidence-inspiring ride – no matter the pavement conditions – with Harley-Davidson® Premium Ride Emulsion Shocks. These fast shocks offer enhanced compression and rebound damping control when compared to typical twin-tube shock absorbers. The nitrogen gas charged shocks resist oil aeration and work with the internal valve stack to provide superior damping control in the twisties. The large pistons and low viscosity high-performance oil allow these shocks to react quickly to impacts and keep the tires tracking the road surface. With the addition of urethane bumpers, you get a controlled ride and minimized bottoming harshness. The locking threaded adjustment lets you fine tune the spring preload to your current riding conditions – whether a solo run on the back roads or a fully-loaded two-up freeway tour. Kit includes left and right shock and preload adjustment spanner wrench.

FOOT CONTROL POSITION COMPARISON

D. STANDARD FORWARD CONTROL KIT – CHROME (50700020 SHOWN)

D . STANDARD FORWARD CONTROL KIT – BLACK (33397-07A SHOWN)

SPORTSTER® FOOT CONTROLS

A long stretch to the controls or a knees-high cramped riding position puts strain on your body after even a short ride. Repositioning your feet on the controls relieves muscle tension, takes pressure off the tail bone, and reduces rider fatigue. Where your feet contact the controls can often determine how many miles you can put on in a day.

Many Sportster® models can be equipped with the following foot control configurations:

MID-CONTROLS:
Original Equipment on some models, Mid-Controls position the feet below the knee for a sporting riding posture.

FURTHER FORWARD MID-CONTROLS:
Achieves a comfortable foot-down riding position for the taller rider.

REDUCED REACH FORWARD CONTROLS:
Provides a foot-forward boulevard style without straining to reach the controls.

STANDARD FORWARD CONTROLS:
Places the legs for a "feet-in the-wind" laid back profiling posture.

EXTENDED REACH FORWARD CONTROLS:
Accommodates the tallest rider by stretching the leg a full 3.5" further forward.

D. STANDARD FORWARD CONTROL KIT*

Add the stretched-out look and extended riding position to your Sportster® model. This kit provides additional leg clearance around the chassis and air cleaner by moving the footpegs outward 1.5" (left) and 0.5" (right). The reduced reach places the rider's boot at the proper pivot point for improved leverage, while maintaining the "foot-forward" riding profile. ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control, and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

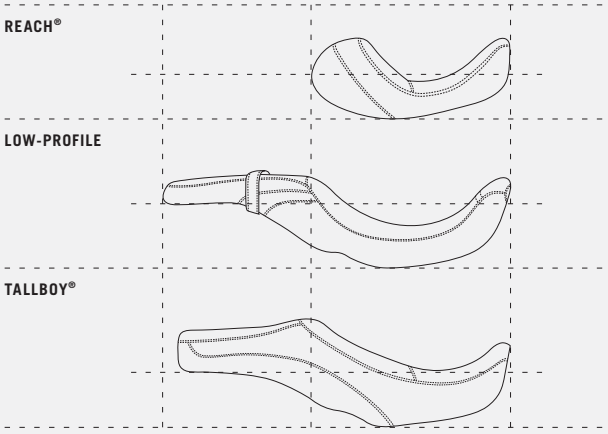

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid-Foot Controls, and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

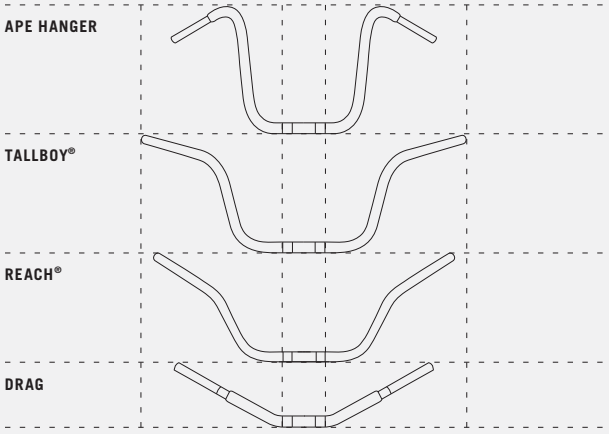

ESTABLISH YOUR POSITION AND FEEL

SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

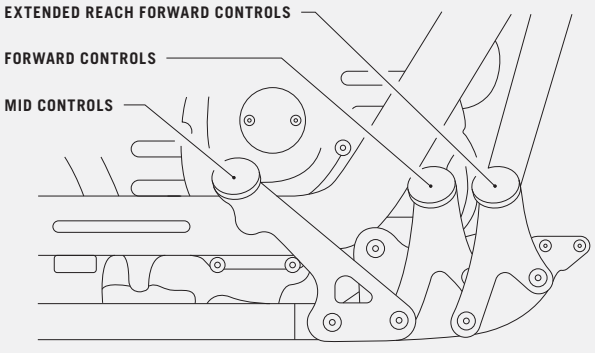

SEE PAGES 113-117

HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

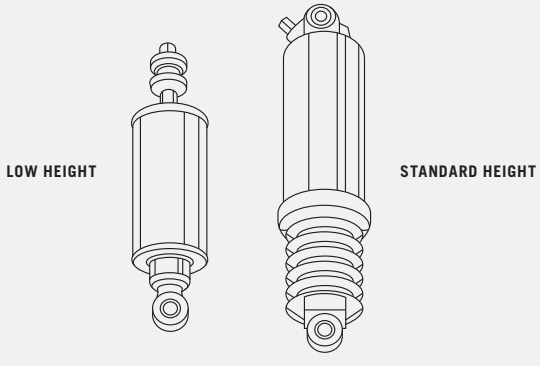

SEE PAGES 632-635

FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 129-133, 580-613

SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

A. PREMIUM RIDE SINGLE CARTRIDGE FORK KIT*

This Single Sided Cartridge Fork provides improved handling performance by keeping the tire in contact with the road surface. Tuned to work in concert with the Premium Emulsion Rear Shocks, the fork damping is controlled by a specifically calibrated piston and valve stack. Unlike typical orifice damping, the piston/valve system helps the cartridge fork achieve a linear damping force curve for consistent feel throughout the compression and extension of the front suspension. The cartridge allows the forks to react quickly to rough roads, inspiring rider confidence in sweeping corners. The compression piston provides excellent low speed damping for a better rider feel, and the rebound spring provides a smoother feel during topping. The cartridge fork resists bottoming and dive, and the triple rate spring and oil lock allows the forks to absorb bumps even under hard braking – giving the rider more control while resisting wheel hop. A perfect addition during the installation of chrome or gloss black lower fork sliders, the kit includes fork pipe, cartridge, fork bolts, main springs and oil seals.

45400058
Fits '06-'17 Dyna® models (except FLD, FXDWG and '07-'08 FXDSE). Original Equipment on FXDLS models.

B. PREMIUM RIDE EMULSION SHOCKS*

Experience a comfortable and confidence-inspiring ride – no matter the pavement conditions – with Harley-Davidson® Premium Ride Emulsion Shocks. These fast acting monotube nitrogen gas-charged shocks offer enhanced compression and rebound damping control when compared to typical twin-tube shock absorbers. The nitrogen gas charged shocks resist oil aeration and work with the internal valve stack to provide superior damping control in the twisties. The large 36mm pistons and low viscosity high-performance oil allow these shocks to react quickly to impacts and keep the tires tracking the road surface. You get a controlled ride and minimized bottoming harshness transmitted through the frame. The locking threaded adjustment lets you fine tune the spring preload to your current riding conditions – whether a solo run on the back roads or a fully-loaded two-up freeway tour – and urethane bumpers provide a softer feel if the shock bottoms under load. The beautifully-finished shocks feature black-anodized billet top caps and black progressively-wound springs. Kit includes left and right shock and preload adjustment spanner wrench.

54000066 Stock Height.
Fits '06-'17 Dyna models (except FLD and '07-'08 FXDSE). Original Equipment on FXDLS models.

***WARNING:** Installation of any accessory suspension components may affect cornering clearance and jiffy stand operation. This could distract the rider, causing loss of control and death or serious injury.

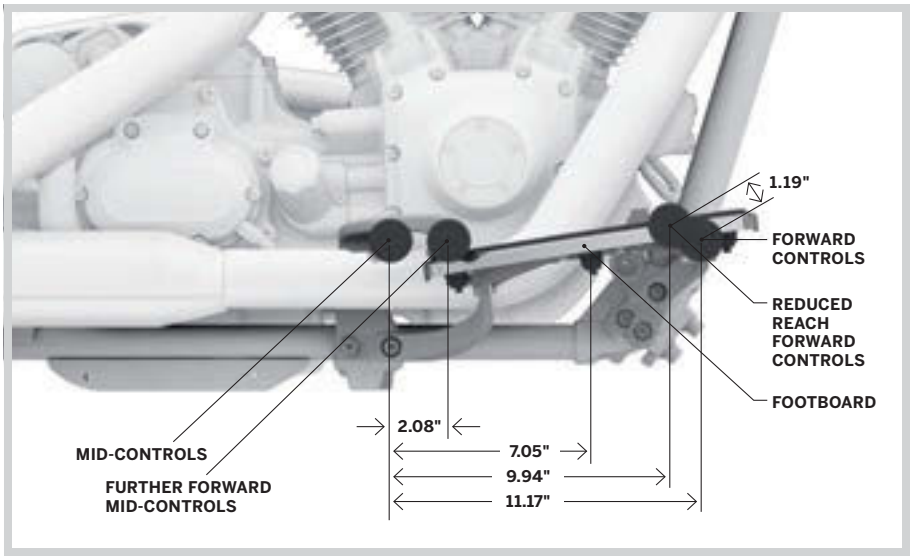

***WARNING:** The Profile Low Front Spring Kit cannot be used independently and must be used with the appropriate Profile Rear Shock Lowering Kit. Installation of any accessory suspension components may affect cornering clearance and jiffy stand operation. This could distract the rider, causing loss of control and death or serious injury.

FOOT CONTROL POSITION COMPARISON

STANDARD FORWARD CONTROLS

REDUCED REACH FORWARD CONTROLS

FURTHER FORWARD MID-CONTROLS

DYNA® FOOT CONTROL*
A long stretch to the controls or a knees-high cramped riding position puts strain on your body after even a short ride. Repositioning your feet on the controls relieves muscle tension, takes pressure off the tail bone, and reduces rider fatigue. Where your feet contact the controls can often determine how many miles you can put on in a day.

Dyna® models can be equipped with the following foot control configurations:

MID-CONTROLS:
Positions the feet below the knee for a sporting riding posture.

FURTHER FORWARD MID-CONTROLS:
Achieves a comfortable foot-down riding position for the taller rider.

REDUCED REACH FORWARD CONTROLS:
Provides a foot-forward boulevard style without straining to reach the controls.

STANDARD FORWARD CONTROLS:
Stretches the legs for a "feet-in the-wind" laid back profiling posture.

FLOORBOARDS:
Supports the entire foot and places the rider in a comfortable upright position.

***WARNING:** Installation of accessory Forward Control Kits may affect cornering clearance. This could distract the rider, causing loss of control, resulting in death or serious injury.

A. STANDARD FORWARD CONTROLS*
Stretch out for maximum comfort and style. This complete kit includes all components necessary to convert a mid-control equipped Dyna® model to forward controls. Moves controls 11.0" forward from mid-control foot position. Kit is available in chrome or gloss black to match your customizing style.

Fits '06-'17 Dyna models with mid-controls. FLD models require separate purchase of footpegs.

49080-06A	Chrome.
49021-09	Gloss Black.

Fits '93-'05 Dyna models. Stock on '03-'05 FXDWG models. Not for use with Engine Guard on FXD and FXDL models.

49080-03A	Chrome.

B. REACH® FORWARD CONTROL KIT*
Want to stretch the riding position of your mid-control equipped model, but not comfortable with the long reach to factory-position forward controls? This complete kit is the perfect alternative. It positions the feet up and forward 10.0" from the mid-control position, but 1.0" closer to the rider than the standard position factory forward controls, placing the rider's boot at a comfortable pivot point for improved support and leverage. Available in chrome or gloss black finish, the kit includes left and right footpeg supports, brake and shift lever assemblies, brake and shift linkages and all required hardware.

Fits '06-'17 Dyna models equipped with mid-controls. FLD models require separate purchase of footpegs.

50700008	Chrome.
50700007	Gloss Black.

C. REACH FORWARD CONTROL CONVERSION KIT*
Love the look and riding position you get with forward controls but not comfortable with the long stretch forward? This Forward Control Conversion Kit repositions the Original Equipment footpegs and foot controls up and back by over 1.0", positioning the controls closer to the rider for added comfort and confidence. The reduced reach places the rider's boot at the proper pivot point for improved leverage, while maintaining the "foot-forward" riding profile. This easy-to-install Conversion Kit includes heavy-duty steel mounts and shortened brake rod. Kit reuses Original Equipment control supports and brake and shift levers or can be personalized with your choice of custom lever styles.

50700005
Fits '03-'17 Dyna models (except FLD) equipped with forward controls.

D. FURTHER FORWARD MID-CONTROL KIT*
Feel a little cramped when your feet are placed on the standard-location mid-controls? This kit repositions the controls 2.0" forward of the stock location, eliminating the "knees-high" riding attitude while maintaining a sporty upright riding posture. The forward location provides an open path for your feet to aid maneuvering the bike while parking and improves access to the jiffy stand for a shorter rider. The shield manages airflow and wind blasts to create a pocket of still air for both rider and passenger comfort. But it's not just about function. This one-piece windshield features a nostalgic horseshoe-shaped outer brace that is the perfect match for your classic Harley-Davidson® motorcycle. Formed from hard-coated polycarbonate to resist scratching, this tall windshield provides maximum protection on the highway, but when you want to ride "naked," the detachable shield can be removed completely or reinstalled in seconds to match your riding mood. Kit includes mounting hardware.

ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control, and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

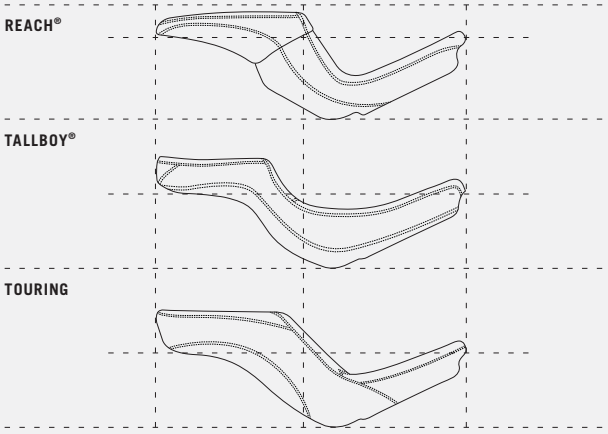

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid-Foot Controls, and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

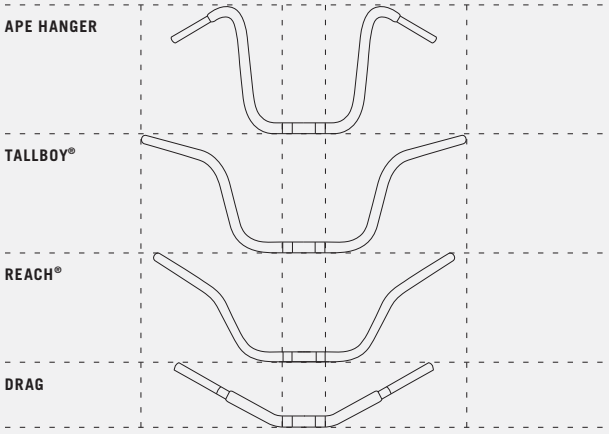

ESTABLISH YOUR POSITION AND FEEL

SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

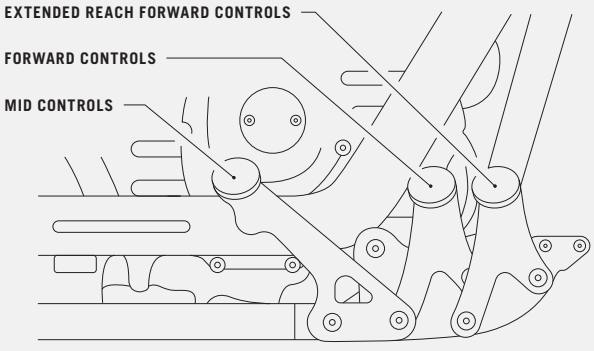

SEE PAGES 173-180

HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

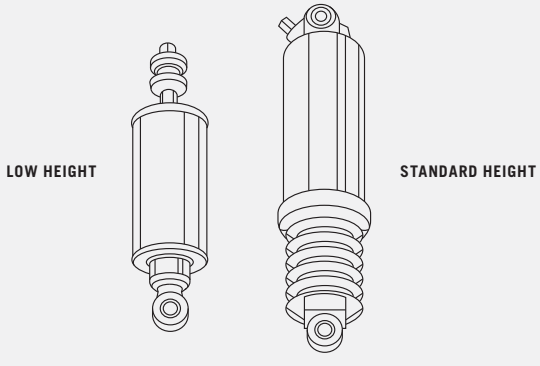

SEE PAGES 632-641

FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 199-202, 580-613

SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

Experience ultimate comfort. Designed to ensure hours of comfort in the saddle, Road Zeppelin® Seat Pads are equipped with a unique air bladder system that allows your weight to be supported evenly across the entire seating surface. This air bladder system is designed to reduce pressure points, provide shock absorption, and reduce vibration. Unlike other mouth-inflated seat pads, the Road Zeppelin Pad features an easy-to-reach integrated hand pump and metered air release valve that permits quick and controllable adjustment. You can easily adjust the comfort and support while seated on the pad. The UV-stable and snag resistant mesh cover allows air to circulate beneath the rider's body, reducing the temperature trapped between the rider and seat. The low-profile design minimizes seat-height change compared to inflatable pads, while enhancing comfort with its shock-absorbing construction. Manufactured of UV-stable materials, these seat pads resist fading when exposed to the sun. Elastic under-seat strap and non-slip base provide secure installation and the available Circulator Passenger Pillion Pad attaches to the rider pad with hook-and-loop tabs.

C. WIND SPLITTER VENTED WINDSHIELD

Reduce helmet buffeting at speed. The Harley-Davidson® Detachables™ Wind Splitter Vented Windshield features an exclusive fingertip-adjustable center vent that reduces turbulence behind the windscreen. When open, the controlled airflow fills the negative pressure area behind the shield and helps to smooth the flow of air over the top of the screen and around the rider. The revised flow reduces helmet bobbing and neck fatigue so you can comfortably spend more time in the saddle. The open vent also provides cooling airflow to the rider at low speeds and in city traffic.

Engineered to provide the riding comfort of a larger windshield, this low-profile screen's contemporary contour sets it apart from the crowd. The shape keeps the windshield below your siteline so you don't look through bugs and road grime and the detachable design means you can ride without the shield when the mood strikes. The shield is formed of hard-coated polycarbonate for strength and scratch resistance and the dark-smoked finish reduces glare. The slim polished stainless steel brackets mount to the Original Equipment rubber isolated docking points for ease of installation and removal.

ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control, and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

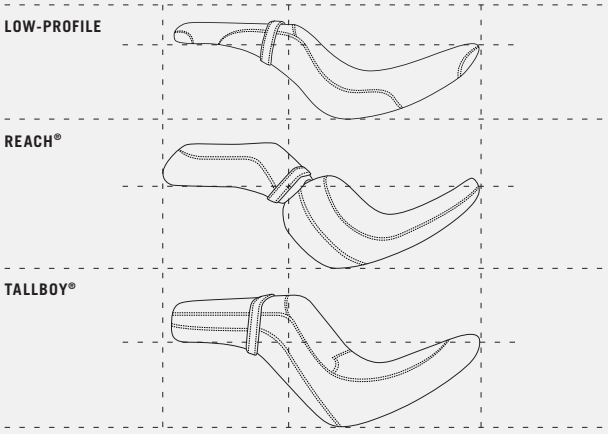

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid-Foot Controls, and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

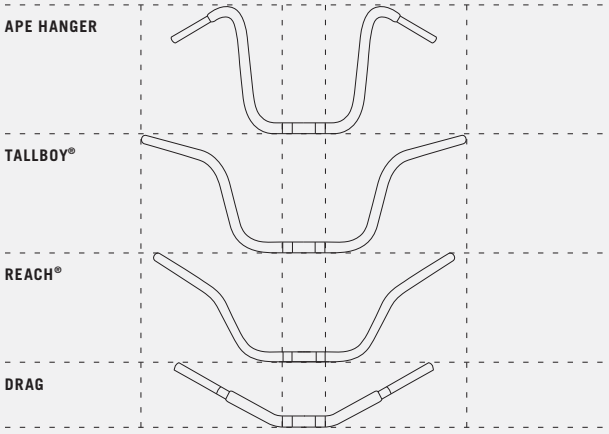

ESTABLISH YOUR POSITION AND FEEL

SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

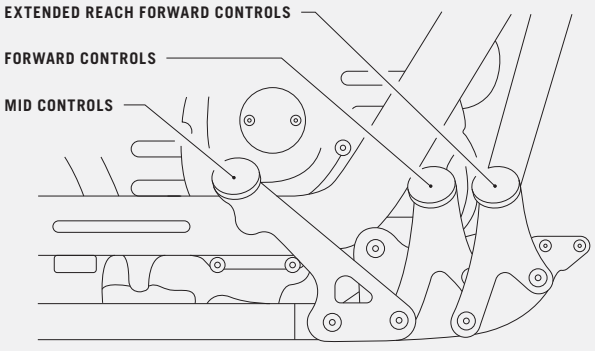

SEE PAGES 224-231

HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

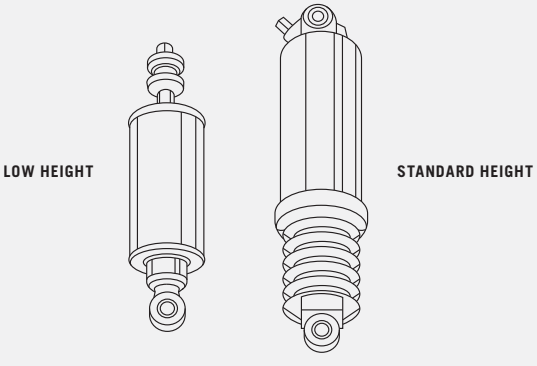

SEE PAGES 632-641

FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 253-258, 580-613

SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

SEE PAGE 252

B. BRAWLER® SOLO SEAT

When it's time to go it alone, go in style. These premium quality cowhide leather solo saddles feature a smooth, sleek design that hugs the frame rails for a true custom look. The Brawler® seat's design places the rider "in" the bike for a low-slung riding position, and features a "kick-up" in the rear to hold the rider in place. The seating position is generally lower than stock, but not as far back as Badlander or other low profile seats. The top-grain leather seating surface and contoured foam padding provide a firm but luxurious feel. Seat does not fit with passenger pillions.

52000267

C. LEATHER BADLANDER® SEAT

The traditional Badlander® seat's low and lean style sets the stage for your minimalist custom ride. The frame-hugging rider seat and the slim tapered passenger pillion visually stretch the bike and enhance the slammed look. The seat shape stays low along its entire length and follows the lines of the bike with minimal disruption, and delivers a riding position that is lower and generally further back than the stock seat. Ideal for both short riders needing to be closer to the ground, or for tall riders that want to move back in the bike without sitting higher. This seat is wrapped in supple top-grain leather and finished with an embroidered Harley-Davidson script. Kit includes leather grab strap and mounting hardware.

52000254
Fits '07-'17 FLSTF, FLSTFB, FLSTFBS, FLSTSB, '06-'15 FXST, FXSTB, FXSTC, FXSTS and '07-'08 FXSTSSE models. Does not fit FLSTSE models. FLSTSB models require separate purchase of Passenger Footpeg Mounting Kit P/N 50932-08 and passenger footpegs. Seat width 12.0"; passenger pillion width 6.5".

D. BADLANDER SEAT

Clean smooth covers, subtle top-stitching and a frame-hugging profile add up to a statement only Harley could create. The low design delivers a reduced seat height that is ideal for riders that want the shortest possible reach to the ground, and the long and lean shape allows tall riders to move back from the hand and foot controls without sitting higher on the bike. Kit includes grab strap and all mounting hardware.

51397-06A

NOTE: Some Harley-Davidson® seats are made of leather. Fine leathers or other natural materials WILL gain "character," such as wrinkles or wear, with age. This is normal. A fine, aged patina and character wrinkles are a sign of the extremely high quality materials used to construct your seat or backrest. The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. Please use Harley-Davidson Leather Protectant P/N 93600034 to protect your investment.

A sissy bar upright and passenger backrest are the starting point to build a complete touring machine. The backrest provides long-range comfort and support and adds a feeling of control and confidence for the passenger. Start by selecting model-specific Docking Hardware, then choose a finish that matches your styling direction, determine the desired sissy bar height, and finally select a backrest pad that complements your seat.

A. WIND SPLITTER VENTED WINDSHIELD

Reduce helmet buffeting at speed. The Harley-Davidson® Detachables™ Wind Splitter Vented Windshield features an exclusive fingertip-adjustable center vent that reduces turbulence behind the windscreen. When open, the controlled airflow fills the negative pressure area behind the shield and helps to smooth the flow of air over the top of the screen and around the rider. The revised flow reduces helmet bobbing and neck fatigue so you can comfortably spend more time in the saddle. The open vent also provides cooling airflow to the rider at low speeds and in city traffic.

Engineered to provide the riding comfort of a larger windshield, this low-profile screen's contemporary contour sets it apart from the crowd. The shape keeps the windshield below your site line so you don't look through bugs and road grime and the detachable design means you can ride without the shield when the mood strikes. The shield is formed of hard-coated polycarbonate for strength and scratch resistance and the dark-smoked finish reduces glare. The slim polished stainless steel brackets mount to the Original Equipment rubber isolated docking points for ease of installation and removal.

A. WIND SPLITTER WINDSHIELD – BATWING FAIRING
In the world of functional performance, size does matter. After all, it's simple to understand that the larger the windshield area, the greater the amount of wind deflection. The Wind Splitter Windshield is a great look for all Touring models and is shaped for the perfect combination of effective airflow management and "wow" styling. The sweeping design complements the shape of the fairing and the inner dash panel and adds height over a traditional low-profile wind deflector in the center where it counts. The shape decreases wind noise and improves your ability to hear the motorcycle's sound system. The rich smoked finish does not interfere with your forward view and looks great against any paint color. The easy-to-install Wind Splitter features a center-mount Bar & Shield medallion for a distinctive finishing touch.

A. WIND SPLITTER WINDSHIELD – ROAD GLIDE®
In the world of functional performance, size does matter. After all, it's simple to understand that the larger the windshield area, the greater the amount of wind deflection. The Wind Splitter Windshield is a great look for all Touring models and is shaped for the perfect combination of effective air flow management and "wow" styling. The sweeping design complements the shape of the fairing and the inner dash panel and adds height over a traditional low-profile wind deflector in the center where it counts. The shape decreases wind noise and improves your ability to hear the motorcycle's sound system. The rich smoked finish does not interfere with your forward view and looks great against any paint color. The easy-to-install Wind Splitter features a center-mount Bar & Shield medallion for a distinctive finishing touch.

A. COOLFLOW™ FAN

Keep your cool on a sweltering summer day. Engineered to maximize rider and passenger comfort in high temperature situations, the CoolFlow™ Fan is the perfect addition if your bike is subjected to parade duty, rush hour traffic, or extreme temperature environments. Unlike traditional fan kits that try to cool the engine by blowing air across the cylinders and often onto your legs, the CoolFlow Fan Kit keeps the riders comfortable by pulling air away from the rear cylinder and exhaust pipe, and directing it toward the ground. The fan suction generates a low pressure region near the riders to balance the natural "up and out" convection air flow in the area behind the engine. The wind-tunnel tested fan is tucked away above the transmission, and when combined with mid-frame air deflectors, significantly drops the temperature the seated rider experiences.

The CoolFlow Fan features switched On/Off/Auto operation on '17-later models and On/Off on '09-'16 models. In the "ON" mode, the fan is active at low speeds, and will turn off when the bike reaches 40mph. As speed drops, the fan turns back on at 35mph. This logic program prevents the fan from cycling on and off during low speed changes. On '17-later models, the AUTO setting operates based on a combination of speed parameters and specific engine and ambient temperatures. Built to withstand the harsh motorcycle environment, the all-weather CoolFlow Fan is 100% waterproof and includes everything you need for installation. The plug-and-play design is integrated with the vehicle electronics, so "On/Off/Auto" fan operation is indicated in the odometer screen. Your dealer will enable this function in the Electronic Control Module (ECM) and you're ready to roll. Odometer fan status display feature availability varies by model and may not be available for your vehicle.

Ideal for bikes that see parade duty and other low speed or continuous idle situations, the Fan Assisted Oil Cooler is also the perfect addition to a bike modified with high performance components. The fan automatically engages when the engine oil temperature rises, and when in operation, the Fan Assisted Oil Cooler can provide up to a 50 degree drop in oil temperature. And unlike other models, the Harley-Davidson® Fan Assisted Oil Cooler utilizes weather-rated fans and electronics that are designed for the harsh motorcycle environment. Engineered as a bolt-on replacement for the Original Equipment oil cooler, the Fan Assisted Oil Cooler is plug-and-play compatible with your bike's wiring harness. No splicing or rewiring is required.

C. PREMIUM OIL COOLER KITS – TOURING

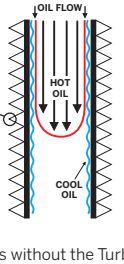

This oil cooler was designed specifically for Harley-Davidson to out-perform all other coolers in the industry. The cooler features a unique "Turbulator" system that evenly distributes oil across the cooling chambers. The air fins are designed to efficiently dissipate heat. The oil cooler has been designed to simplify installation and enhance performance. The large heat exchanger provides excellent cooling efficiency. The kit features a one-piece adapter plate with integrated thermostat that allows oil lines to connect to the oil filter bracket. Thermostat activates at 185°F (85°C). Kit comes complete with mounting hardware and precut oil lines.

Inside View of Premium Oil Cooler with Turbulators

Turbulators disperse and mix oil inside cooler to provide more efficient cooling capabilities. The cooler oil is not allowed to remain along the boundaries of the flow tube as in conventional coolers.

Inside View of Conventional Oil Cooler without Turbulators

Coolers without the Turbulator system allow oil to flow only in a straight path. Oil does not mix and the cooler oil remains along the outer boundaries, while the hotter oil remains along the center path of flow. Without the mixing effects of the Turbulators, the conventional oil cooler provides less efficient cooling capabilities.

COMFORT IS KING

The ability to spend hours behind the handlebars and rack up hundreds of miles without stopping is dictated by how you feel on your bike. The shape of the seat, the reach to the handlebars and the location of your feet are all major factors in how far you can travel in a day. But don't forget your passenger's needs — they have a stake in this ride as well.

THE RIDER & PASSENGER ENVIRONMENT

Accessories that impact the rider and passenger's physical contact with the motorcycle and the management of wind, temperature and road conditions should be your first consideration in building the ultimate touring machine.

ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control, and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

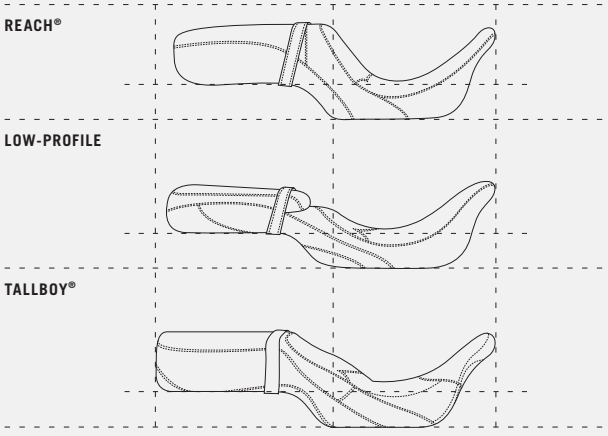

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Standard Foot Controls, and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

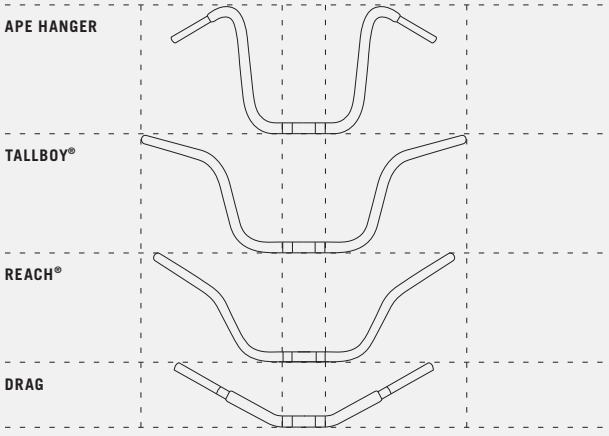

ESTABLISH YOUR POSITION AND FEEL

SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

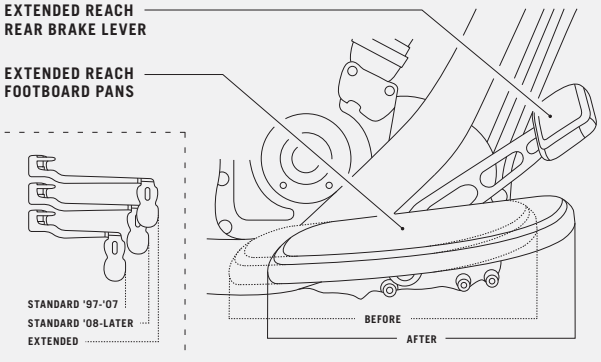

SEE PAGES 326-337

HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

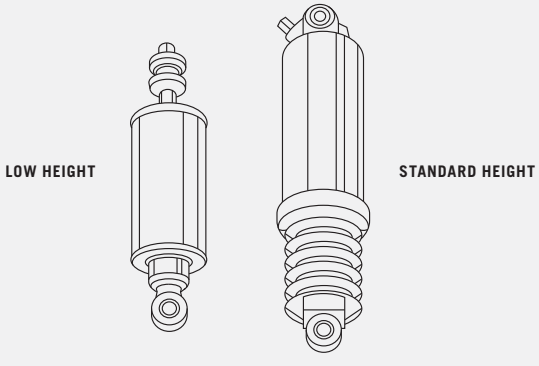

SEE PAGES 635, 640-648

FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 584-592, 596-605, 610-611

SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

SEE PAGES 386-388

REACH® SEATS
Designed to position riders with a shorter inseam closer to the ground, Reach® Seats are shaped to place the rider in a comfortable and confident relationship to the hand and foot controls. The wide seating surface provides loads of support while riding and the narrow tapered nose brings your legs together for an easier reach to the ground at a stop. Reach Seats feature a stepped profile that provides back support and keeps the rider from sliding back during acceleration.

A. SUPER REACH SEAT
Get a little bit closer. Super Reach forward position seats are designed to move riders with a shorter inseam even closer to the controls and to bring the legs about 1.0" closer together so that your feet rest firmly on the pavement. The scooped bucket-shape saddle is enhanced with added back support padding to move the rider lower and forward.* The combination positions the rider closer to the hand and foot controls to offer both comfort and confidence. Seat can be equipped with optional rider backrest for added support and comfort.

*Measurements based on Original Equipment Electra Glide® seat:
'09 models – 2.0" lower, 2.5" forward
'10-'13 models – 1.5" lower, 2.5" forward
'14-later models – .5" lower, 2.0" forward

A. SUPER REACH SEAT

B. REACH SOLO SEAT
From the custom metal Bar & Shield medallion to the sleek fast-back design, this seat is shaped to deliver the ergonomic position that a shorter rider needs. Sculpted and molded to ease the reach to the ground, this Reach Solo seat places the rider 3/8" lower and 1-1/4" forward when compared to the stock FLHX seat*. The narrow nose and the low overall height provides the rider with added confidence and control while the bike is at a stop or during parking maneuvers, while the generous seating width adds support for the long haul. And the seat's upturned tail moves you closer to the controls without confining you to one position. For maximum comfort and support, this seat is recommended for smaller framed riders between 5'-2" and 5'-8" tall.

A. HARLEY® HAMMOCK TOURING SEATS
Stay in the saddle all day. These Harley® Hammock Seats feature broad seating surfaces and a shallow bucket shape to distribute the weight and reduce pressure points. Beneath the two inches of traditional dual-density foam, the rider's weight is supported by a revolutionary fabric suspension system. The sling-like suspension system is integrated into the seat and acts like a hammock, providing two inches of suspension above the seat pan. This internal system prevents bottoming out and provides a 30% improvement in comfort and endurance over the long haul by sheltering the rider from pothole and highway expansion joint impacts. The generous seat length permits freedom of movement on long rides, making this seat a perfect option for taller riders.

ROAD ZEPPELIN® AIR ADJUSTABLE SEATS
The open road. That's where we developed and tested the revolutionary comfort of the Road Zeppelin® Seat. This remarkable seat removes pressure points and hot spots by adjusting the amount of air contained in each bladder within the seat. Easy-to-reach rocker switches on the side of the seat control the built-in compressor, adding and bleeding off air with the quick push of a button to help relieve stress from the lower back, tailbone or lower extremities. On a long run, occasionally inflating and deflating the air bladders reduces the "numb butt" effect by improving the blood flow to the extremities. So grab a seat. And enjoy the ride.

The Road Zeppelin seat's ergonomically-friendly design combines a narrow front nose for ease of touching the ground at a stop with a wide seating surface for long range rider and passenger comfort. Designed to work with all Original Equipment suspension configurations and with Profile® suspension lowering kits, the adjustable feet can be set to lift the rear tire clear of the pavement, or to keep the rear tire on the ground for reduced lifting effort. SCREAMIN' EAGLE® PRO STREET TUNER

The Screamin' Eagle® Pro Street Performance Tuner is designed to simplify management of engine operating parameters as performance modifications are made. Once installed, the kit will allow you to adjust key parameters or simply upload the latest Engine Control Module (ECM) calibrations to match your bike's state-of-tune. Start with a high-flow air cleaner and Street Performance mufflers and upload the calibration that provides the best performance mix. Add additional Stage Upgrades later, and you simply upload the proper ECM calibration to match the model and hardware. Plus, you have free online access to the latest factory calibrations.

Ideal for real-world street performance applications, the Pro Street Tuner provides the adjustability to account for bike-to-bike variation and for changes to cams, heads, intake and exhaust while maintaining closed-loop fuel control for fuel economy in the part-throttle operating range. Unlike other aftermarket tuners, The Screamin' Eagle Pro Street Tuner actually talks directly to your motorcycle's ECM and re-programs the motorcycle's operating system. It isn't a piggyback system that tries to fool the ECM into adding more fuel or changing the ignition timing. The Pro Street Tuner plugs into the bike's data port, so no splicing or under-seat hardware is required.

After you upload the proper ECM calibration, dial it in with the Smart Tune function. The guided Smart Tune process walks you through the process to; find the right calibration for your build, set the tuner to a data collection mode and then allows you to incorporate the data after the ride with just a few clicks. The ECM calibration is then custom fit for your bike. The module will store up to 15 minutes of run-time data information that can be downloaded to your PC, allowing the rider or technician to view and evaluate the bike's air/fuel ratio, O_2 sensor readings, engine speed and temperature, RPM and vehicle speed, throttle position, spark advance and many more performance characteristics. The Vehicle Communications Module (VCI) will also record and display service codes for troubleshooting and diagnostics. The kit includes the VCI module and unlimited access to the latest software updates and calibrations available from Screamin' Eagle. Tuner Cable kit sold separately.

The Pro Street Tuner software includes impressive features:

- Features a guided Smart Tune process to enable quick navigation through the oftware, whether you are new to tuning or an experienced user.
- Smart Tune Live – a dynamic and visual method to track and capture engine data simply by running the vehicle through a range of RPM and throttle positions. This feature reduces the time to modify existing VE (Volumetric Efficiency) tables which are then analyzed and tuned. Smart Tune Live works on models with factory-installed O_2 sensors only.
- Adjustability to Spark Advance, Throttle progressivity, and Volumetric Efficiency to custom tune the performance combination.
- 50-State U.S. EPA compliant.

The Pro Street Tuner permits tunability to optimize performance and drivability without compromising fuel efficiency, emission levels, engine durability, or 50-State U.S. EPA compliance. And unlike other race tuners or engine controllers, the Screamin' Eagle Pro Street Tuner does not impact your Harley-Davidson factory warranty coverage.

A. SCREAMIN' EAGLE SMART TUNE PRO AUTOMATIC TUNING MODULE

A. SCREAMIN' EAGLE® SMART TUNE PRO AUTOMATIC TUNING MODULE*

Smart Tune PRO works with the Screamin' Eagle® Pro Street Tuner to automatically adjust your bike for the combination of performance components, climates, and vehicle load conditions you are operating in. You just install the upgraded wideband oxygen sensors in the exhaust headers, download the calibration that the Screamin' Eagle engineers have developed as a starting point, then simply drive down the road and let Smart Tune Pro do the work.

Smart Tune PRO constantly monitors the operating parameters of your motorcycle, and automatically adjusts the bike's Electronic Control Module (ECM) to maximize performance in your current riding conditions. Smart Tune Pro utilizes wideband O_2 sensors that read oxygen levels in the exhaust stream to determine the optimum air/fuel ratio your bike needs at this very moment. Smart Tune Pro analyzes the data and automatically makes real-time tuning adjustments to the ECM. Unlike the standard narrow-band O_2 sensors that only provide feedback in the part-throttle cruising range, the wideband sensors can read and adjust tuning throughout the part throttle cruising and full-throttle acceleration operating range.

It is fully factory supported, and optimized to maximize performance while maintaining drivability and engine longevity. Smart Tune PRO is 50-state EPA compliant* and does not impact the H-D factory warranty. MILWAUKEE-EIGHT® POWERTRAIN

Screamin' Eagle® Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance. Start with the foundation, the Stage 1 upgrade, then choose from Stage II, III or IV depending on your performance goals, budget and riding style.

STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost effective step to improve your motorcycle's performance is to increase the air flow into and out of the engine. A high-flow air cleaner and system-matched slip-on muffles provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved air flow.

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.

Street legal and/or street compliant statements refer to product meeting 50-State emissions and noise standards in the United States. The street legal and/or street compliant statements may not apply to markets outside of the United States.

STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low- to mid-RPM at cruising speed. A power cam targets high-rpm, wide-open throttle response that keeps pulling right up to the redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Stage II upgrade requires minor engine disassembly to replace the cam. Adjustable pushrods allow cam installation without removing the rocker box. Special tools and ECM tuning are required.

STAGE III

STAGE I + CAM, BIG BORE CYLINDERS & PISTONS

The next step on the performance journey is to build a bigger engine. An increase in engine displacement allows the engine to swallow more air and fuel, a higher compression piston squeezes the air/fuel into a more volatile mixture, and when combined, generates more power when ignited. A displacement and compression increase provides torque increases throughout the entire RPM range with a 15-25% improvement in the mid-range power. ECM calibration tuning is required to adjust fuel flow and timing to accommodate the increased displacement.

Stage III bolt-on upgrade requires removal of the engine's top-end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAM, BIG BORE CYLINDERS, PISTONS, CYLINDER HEADS & THROTTLE BODY

To maximize the impact of the increased displacement gained with Stage III updates, the addition of free-flowing ported cylinder heads and a big bore throttle body top off the performance build. Designed to satisfy the high RPM, throttle twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Stage IV bolt-on upgrade requires removal of the engine's top-end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

MILWAUKEE-EIGHT ENGINE STAGE I

INSTALLATION

INTAKE + EXHAUST + TUNING UPGRADE = FOUNDATION FOR ALL FUTURE STAGES

"I want simple bolt-on performance upgrades that enhance the performance, look and sound of my motorcycle."

STEP 1 CHOOSE YOUR INTAKE

Select between Air Cleaners that allow you to maintain the stock Air Cleaner Cover or upgrade to Air Cleaners featuring stylized covers and/or stylized cover inserts. All Screamin' Eagle Air Cleaners allow for free-breathing and unobstructed airflow to your Milwaukee-Eight engine.

More airflow equals more power.

STEP 2 SELECT YOUR EXHAUST

Screamin' Eagle® exhaust is dialed in to enhance the performance of your Milwaukee-Eight engine and when paired with a free-flowing air cleaner and proper tuning, delivers horsepower and torque gains you can feel. Select from 3.5" or 4.5" Street Cannon Slip-On Mufflers for various Softail® and Touring models or a 4.5" High-Flow Exhaust with Street Cannon Slip-On Mufflers for Touring models. Both the Street Cannon Slip-Ons and the High-Flow Exhaust systems provide a rich exhaust note with a deep base rumble and a throaty tone on acceleration while reducing unwanted tones with a premium fiberglass packing. The High-Flow Exhaust also includes a large diameter, high-flow catalyst for a free flowing system that does not impede performance.

STEP 3 UPGRADE YOUR ECM

When upgrading your intake and exhaust, you must recalibrate your Engine Control Module (ECM), also known as tuning. Start with the Screamin' Eagle Pro Street Tuner. This tuner offers base calibrations for your Stage upgrade, constant monitoring of the engine operation in the Part Throttle Cruising Range and, enables manual adjustments to fine-tune parameters within part and full throttle ranges. The Pro Street Tuner provides manual adjustment for maximum performance and optimal efficiency for your bike.

STEP 4 TAKE IT TO THE NEXT LEVEL

Don't want to fuss with manual adjustments? Let the Smart Tune Pro do it for you. Using the Pro Street Tuner base calibrations as a starting point, the Smart Tune Pro automatically adjusts tuning parameters in real-time within the complete motorcycle operation range. Smart Tune Pro provides automatic adjustment for maximum performance plus optimal efficiency and automatic adjustment for your bike in all riding conditions and combinations of performance upgrades.

* Dynamometer settings, motorcycle condition, variation, climate and other factors can affect performance output and can vary from the performance values declared by Harley-Davidson. 50-State street-compliant stage upgrades retain the Motorcycle Original Equipment Manufacturer's Warranty

- Displacement increases are accomplished with larger cylinders, matching pistons, and the proper cam upgrade

THE PERFORMANCE

- Riders will experience a performance increase throughout the entire RPM range, with up to a 35% increase in the mid- to upper- RPM range
- Produces instant passing power without downshifting
- Delivers excellent stoplight to freeway speed and on-ramp acceleration

When installed by an authorized Harley-Davidson® Dealer within 60-days of the vehicle purchase, compliant kits do not impact the vehicle's limited warranty.

C. SCREAMIN' EAGLE® MILWAUKEE-EIGHT® ENGINE STAGE III KIT

STAGE IV

THE BASICS

- Highest level performance upgrade available to provide a maximum increase in displacement, compression and flow
- Higher-flowing CNC ported cylinder heads and larger bore throttle body increase the velocity and feed large volumes of air and fuel into the engine, which maximizes power on a larger displacement engine
- Combines ported cylinder heads and larger throttle body in combination with cylinders, matching pistons and proper cam

A. SCREAMIN' EAGLE® MILWAUKEE-EIGHT® ENGINE STAGE IV KIT

This Stage IV Kit was developed to deliver maximum horsepower from the Milwaukee-Eight® engine – all the way to the redline. The system-matched combination of larger displacement cylinders, free flowing CNC-Ported cylinder heads and a cam with the highest available valve lift are the starting point to building the perfect engine for the performance junkie. The addition of the large 64mm bore throttle body and high-flow injectors provides great acceleration from first gear through sixth and exceptional response at the twist of the throttle. Designed for a high level of flexibility, this package is ideal for riders who want stump pulling torque throughout the rpm range and also crave plenty of arm-pulling acceleration when you whack the throttle. The Stage IV 107 to 114 upgrade delivers up to 52% more power, and the 114 to 117 upgrade increases power by up to 40% when compared to the Original Equipment engine configurations.

- Delivers increased response throughout the entire RPM range
- Provides thrilling acceleration when twisting the throttle
- Maintains flat torque curve from cruising RPM to redline
- Can be installed without removing the engine from the chassis

TWIN CAM POWERTRAIN

Screamin' Eagle® Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance.

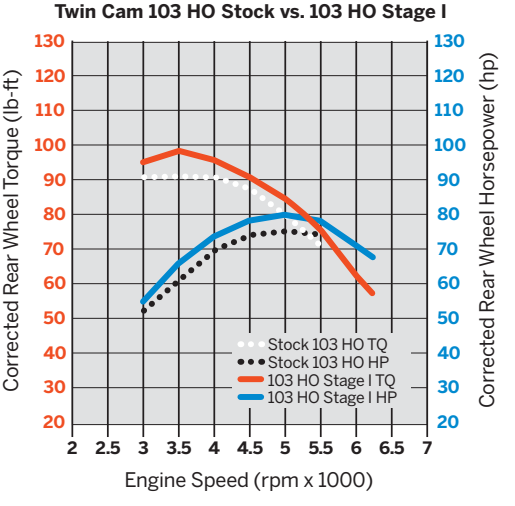

STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost effective step to improve your motorcycle's performance is to increase the air flow into and out of the engine. A high-flow air cleaner and system-matched slip-on muffles provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved air flow.

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.

STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low- to mid-RPM at cruising speed. A power cam targets high-rpm, wide-open throttle response that keeps pulling right up to redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Stage II upgrade requires minor engine disassembly to replace the cam. Adjustable pushrods allow cam installation without removing the rocker box. Special tools and ECM tuning are required.

STAGE III

STAGE I + CAMS, BIG BORE CYLINDERS & PISTONS

The next step on the performance journey is to build a bigger engine. An increase in engine displacement allows the engine to swallow more air and fuel, a higher compression piston squeezes the air/fuel into a more volatile mixture, and when combined, generates more power when ignited. A displacement and compression increase provides torque increases throughout the entire RPM range with a 15-25% improvement in the mid-range power. ECM calibration tuning is required to adjust fuel flow and timing to accommodate the increased displacement.

Stage III bolt-on upgrade requires removal of the engine's top-end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAMS, BIG BORE CYLINDERS, PISTONS, CYLINDER HEADS & THROTTLE BODY

To maximize the impact of the increased displacement gained with Stage III updates, the addition of free-flowing ported cylinder heads and a big bore throttle body top off the performance build. Designed to satisfy the high RPM, throttle twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Stage IV bolt-on upgrade requires removal of the engine's top-end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

B. SCREAMIN' EAGLE® HIGH-FLOW EXHAUST SYSTEM WITH STREET CANNON MUFFLERS

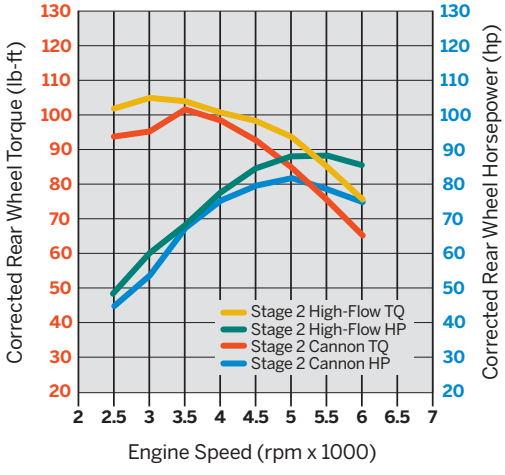

The Screamin' Eagle® High-Flow Exhaust system provides bolt-on performance by reducing the catalyst restrictions and improving exhaust flow. This exhaust system is optimized for use on engines producing 80+ horsepower and works great with Screamin' Eagle Stage Kits. The kit replaces the stock head pipe and mufflers with large diameter, free-flowing head pipes and matching mufflers. The muffler inlet diameter has been increased to 2.25" to enhance exhaust gas scavenging and the catalysts have been relocated to the mufflers to enhance flow. The proof is in the horsepower and torque numbers. Dial the system to your motorcycle by using the Screamin' Eagle Pro Street Tuner to tune your ECM specifically to match your performance upgrades.

The large 4" diameter Street Cannon mufflers are tuned to provide a deep bass exhaust note and a healthy rumble at idle, and that famous Harley sound throughout the RPM range. 50-State U.S. EPA compliant.

TWIN CAM STAGE II UPGRADE

Camshafts are a fundamental ingredient in the performance recipe, because they control the timing and duration of all major engine events. They are the primary means by which you can tune your engine's horsepower and torque output. Every cam has unique lift and overlap performance characteristics, which means you need to select cams based on exactly the kind of power you're looking for.

A. SCREAMIN EAGLE® TWIN CAM PERFORMANCE CAMS

Kits include front and rear cams. Splined rear cam is included for exceptional load handling capability. Gaskets and bearings not included. Cam Installation Kit P/N 17045-99C (sold separately) includes all required gaskets, bearings and seals for proper installation. Dealer installation is recommended and special tools are required for proper installation.

SE-255 CAM KIT

The ultimate in torque cams, this cam offers substantial increase in low end torque for engines up to 110 cubic inches with compression ratios up to 10 to 1. The low end torque increases are great for heavy bikes or for the person who routinely shifts below 4500 RPM and wants the power available to pass without downshifting. The cam still makes peak power above 5000 RPM so people with lighter bikes will enjoy the torque increases without feeling like the bike runs out of air at higher engine speeds. 50-State U.S. EPA compliant.

25638-07

For use on '09-'13 Dyna®, Softail®, and '09-'13 Touring and Trike models with 103CI and 110CI engines. All models require ECM calibration for proper installation. Labor cost not included. See Dealer for details.

SE-259E CAM KIT

Developed specifically for big displacement Twin Cam engines, this cam has a modern lobe design that allows for higher valve lifts for a given duration. A high-lift version of the SE-211 camshaft, this cam works great with 103 cubic inch and larger engines with free-flowing intake and exhaust. It can be used with stock heads (updated with race springs) and high-compression pistons for even more torque than a SE-211 cam or can be coupled with any of the performance heads to realize the full power potential. 50-State U.S. EPA compliant.

25482-10

For use on '11-'15 103CI and 110CI Touring and Trike models. Installation requires separate purchase of Performance Valve Spring Kit P/N 18013-03A. All models require ECM calibration for proper installation. Labor cost not included. See Dealer for details.

SE-585 CAM KIT

This cam is a great match for riders of heavy Touring bikes looking for big torque at the low end. Just a quick downshift to fourth gear results in an effortless pass of that slow moving tractor-trailer ahead of you. This cam provides an early hit of torque at the low end of the RPM spectrum. A unique combination of lift, cam lobe duration and an enhanced cam profile ramp provides a performance boost you can feel. The cam's QRD (Quiet Ramp Design) delivers high torque throughout the RPM range while reducing valve train noise. 50-State U.S. EPA compliant.

25400117

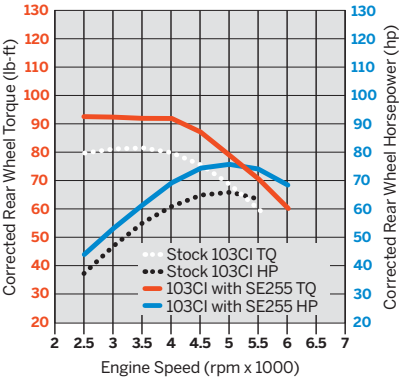

For use on '14-'16 Touring models with the use of a 58mm Throttle Body. Also fits '14-'16 CVO™ Touring models with or without the use of a 58mm Throttle Body. Does not fit Trike models. Installation requires separate purchase of Performance Valve Spring Kit P/N 18013-03A. All models require ECM calibration for proper installation. Labor cost not included. See Dealer for details.

NOTE: Separate purchase of Cam Drive Retention Kit P/N 25566-06 and Cam Spacer Kit P/N 25928-06 may be required. These kits contain five different spacers to achieve proper sprocket alignment. Individual spacers can be purchased separately.

Twin Cam Stage II Upgrade

A. SCREAMIN' EAGLE® BILLET CAM SUPPORT PLATE WITH HIGH-VOLUME OIL PUMP

A great upgrade for any performance motor. The Billet Cam Support Plate is manufactured from billet aluminum with pressed-in bronze bushings and is pre-assembled with the crankshaft bushing and oil pressure relief valve. Aluminum is specified at 6061 billet plate, heat-treated to T6 specifications with a surface-hardened anodized finish to provide superior strength, rigidity and durability. CNC-precision machining ensures precise dimensions and constant material thickness across the plate, enabling perfect alignment of cams and chains. Cam bushings are made from 660 bronze materials to provide enhanced wear resistance and to stand up to increased loads from the high lift cams common in large displacement motors. The improved Screamin' Eagle® high-flow oil pump provides higher pressure when the oil is hot to keep pressure drops to a minimum and increases the oil supply by 16% and the scavenging by 29% over the '06-'17 Original Equipment oil pump.

25282-11

Fits '06-'17 Dyna® and '07-'17 Softail®, and '07-'16 Touring and Trike models. Installation requires separate purchase of Cam Service Kit P/N 17045-99D and Drive Gear Retention Kit P/N 25566-06.

The billet cam support plate has been designed to allow the installation of the Twin Cam 96 hydraulic cam chain tensioner to Twin Cam 88-equipped models. These Hydraulic Cam Chain Tensioners will significantly outlast the spring loaded tensioners and are an ideal addition to an engine modified for improved performance. In addition, '02-'06 models utilize a Twin Cam 96 single row front roller chain and sprocket (included in kit). '99-'01 models use Original Equipment front silent chain and sprocket to retain the cam position sensor function. The kit includes an improved Screamin' Eagle High-Flow Oil Pump that provides increased oil pressure at high-operating temperatures. This kit increases the oil supply by 23% and scavenging by 50% when compared to the '99-'05 Original Equipment oil pump and reduces operating temperature of bearings to improve bearing life.

BOLT-ON TWIN-CAM 110 BIG BORE STAGE KITS

HIGH-STRENGTH CYLINDER LINERS ARE MACHINED TO SLIP INTO THE STOCK CASE OPENING

FEATURES

BOLT-ON BIG BORE CYLINDERS

In the past, the only way to increase the bore of your 103 or 110 cubic inch Twin Cam V-Twin motor was to tear down the motor and re-bore the engine cases to fit larger bore cylinder spigots. It was a labor-intensive and expensive process. The Screamin' Eagle team has engineered a 4" Big Bore Cylinder and Piston package that increase the internal bore from 3-7/8" to 4", without increasing the outside diameter of the cylinder spigot. The cylinder slips into the existing case bore without modification.

SPORTSTER® POWERTRAIN

Screamin' Eagle® Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance.

STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost effective step to improve your motorcycle's performance is to increase the air flow into and out of the engine. A high-flow air cleaner and system-matched slip-on mufflers provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved air flow.

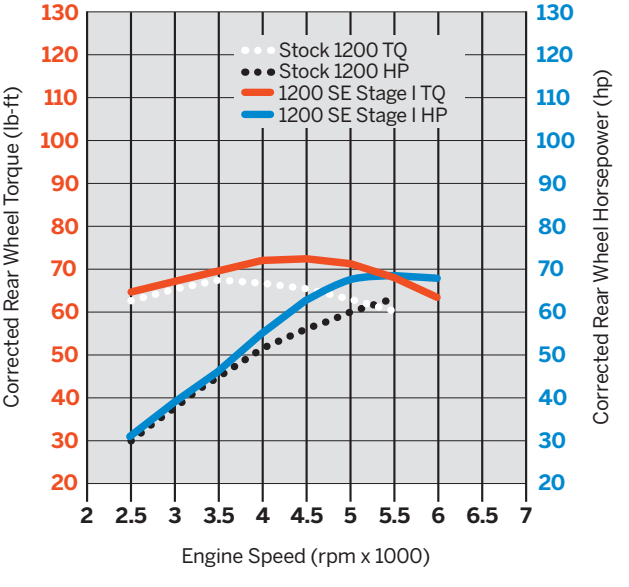

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.

Street legal and/or street compliant statements refer to product meeting 50-State emissions and noise standards in the United States.

Sportster 1200 Stock vs. 1200 Stage I*

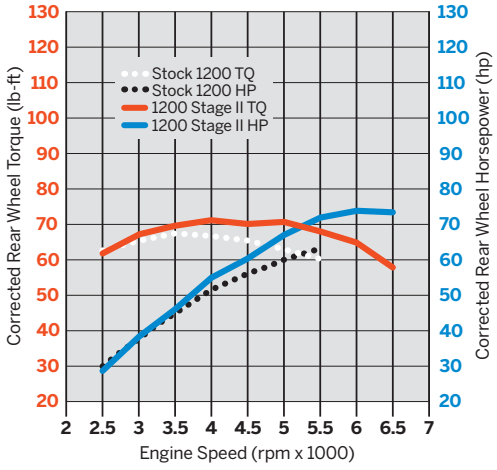

***14-later XL1200 Stage II with Heavy Breather A/C & Street Cannon Mufflers**

STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low- to mid-RPM at cruising speed. A power cam targets high-rpm, wide-open throttle response that keeps pulling right up to redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Sportster 1200 Stock vs. 1200 Stage II*

*14-later XL1200 Stage II with Heavy Breather A/C & Street Cannon Mufflers

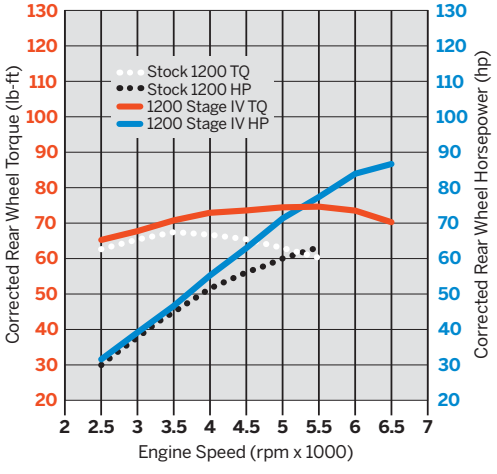

Stage II upgrade requires minor engine disassembly to replace the cam. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAMS, PISTONS, CYLINDER HEADS & THROTTLE BODY

For maximum performance improvement, the addition of high-compression pistons, free-flowing ported cylinder heads and a big bore throttle body top off a performance build. The large diameter throttle body and port-matched intake manifold deliver huge volumes of fuel and air to the engine, the smooth passages and larger valves easily dump the mixture into the engine, and the high compression pistons squeeze the air/fuel into a more volatile vapor. When ignited, the result is a major power increase. Designed to satisfy the high RPM, throttle twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Sportster 1200 Stock vs. 1200 Stage IV*

*1200 Stage IV with High-Flow A/C & Street Cannon Mufflers

Stage IV bolt-on upgrade requires removal of the engine's top-end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

F. SCREAMIN' EAGLE VARIABLE PRESSURE CLUTCH

Get more performance from the Original Equipment clutch. The Screamin' Eagle® Variable Pressure Clutch is designed to help put the added power from a Screamin' Eagle Stage Kit to the pavement. This bolt-on kit harnesses the centrifugal force of spinning weights to increase the clutch capacity as engine speed increases. The mechanism applies increasing pressure to the stock clutch pressure plate as RPM rises. The result: High torque-handling capabilities without increasing clutch lever effort at idle. The Variable Pressure Clutch also provides smoother clutch disengagement at lower speed. Kit fits behind most stock derby covers with no modifications. See installation manual for additional accessory derby cover fitment information.

To match the performance demands of your engine, team the Variable Pressure Clutch with your choice of clutch diaphragm springs. We recommend the higher capacity Screamin' Eagle Diaphragm Spring P/N 37951-98 for major performance upgrades.

	Lever Effort	Torque Capacity

A. SCREAMIN' EAGLE® TWIN CAM PERFORMANCE ASSIST AND SLIP (A&S) CLUTCH KIT

Developed for the high-thrust 110CI engine featured as Original Equipment on '14-later CVO™ models, this A&S clutch provides significantly increased torque-handling capacity (135lb/ft). Clutch is designed to improve engagement grip and provides minor slippage during downshifting to reduce shock to the power train. Reduces hand lever pull effort by over 1 pound. Complete kit features improved clutch plates for enhanced wear resistance and is the perfect addition when installing a high-output Screamin' Eagle® Stage Kit.

37000026
Fits '14-'16 Touring and Trike models with hydraulic clutch actuator. Original Equipment on FXDLS, FLSS, FLSTBS and FXSE models.

B. SCREAMIN' EAGLE PERFORMANCE CLUTCH FRICTION DISC KIT

Newly-developed friction material delivers longer life than Original Equipment friction discs. Kit includes new precision-machined flat steel plates. This Friction Disc Kit is a perfect match for the Screamin' Eagle Twin Cam Performance Race Clutch Hub Kit P/N 37976-08.

37980-10
Fits '99-'17 Twin Cam-equipped models and '98-'99 Evolution® 1340-equipped models. Will not fit '13-'16 CVO Touring models with hydraulic actuated clutch or, '15-'16 FLHTCUL and FLHTKL, '16-'17 FXDLS, FLSS, FLSTFBS, FXSE or '13-'16 CVO Touring models with hydraulic actuated clutch, '15-'16 FLHTCUL and FLHTKL or '14-'16 Touring and Trike models equipped with Screamin' Eagle A&S Clutch Kit P/N 37000026.

C. HEAVY DUTY CLUTCH SPRING FOR STOCK CLUTCH

37951-98
Fits '99-'17 Twin Cam-equipped models and '98-'99 Evolution 1340-equipped models. Will not fit '16-'17 FXDLS, FLSS, FLSTFBS and FXSE or '13-'16 CVO Touring models with hydraulic actuated clutch, or '15-'16 FLHTCUL and FLHTKL, '14-'16 Touring and Trike models equipped with Screamin' Eagle A&S Clutch Kit P/N 37000026.

D. SCREAMIN' EAGLE PERFORMANCE CLUTCH KIT

Performance Clutch Kit converts the 8-plate clutch to a 9-plate design. The surface area is increased by 13% and the spring rate is increased by 10% for a combination that can handle over 115 ft-lbs of torque at the crank, a 23% increase over the stock-rated capacity. Kit includes Kevlar® fiber-based friction discs and performance clutch spring.

38002-04
Fits '91-later XL and '94-'97 Evolution 1340-equipped models.

E. SCREAMIN' EAGLE PERFORMANCE SLIPPER CLUTCH FOR VRSC™ MODELS

This clutch offers reduced lever effort and improved performance. The unique "slip and assist" ramp system opens the two halves of the clutch hub slightly during high loads to the drivetrain, allowing a moderate slip that reduces shock to the drivetrain during rapid downshifting. The resulting reduction in wheel hop allows maximum contact between the tire and the road in wet or slippery conditions. Clutch lever effort is also reduced by 20% in 1130cc and 30% on 1250cc applications.

37938-08KA
Fits '02-'07 VRSC™ models.

The Screamin' Eagle 6-Speed Transmission has been tested and validated using the same rigorous procedures that Original Equipment transmissions are subjected to and is backed by a 12 or 24-month (depending on model year) unlimited mileage warranty when installed at the time of a new bike purchase.

F. SCREAMIN' EAGLE 6-SPEED TRANSMISSION AND GEAR SET (SHOWN WITH SCREAMIN' EAGLE TRANSMISSION SIDE COVER FOR 6-SPEED TRANSMISSION)

F. SCREAMIN' EAGLE® 6-SPEED TRANSMISSION AND GEAR SET

Designed from the ground up, the Screamin' Eagle® transmission incorporates many of the best Original Equipment features, like a late-style shifting mechanism and a newly designed "shift ring" system to make this the smoothest shifting Harley-Davidson® transmission available. The "shift ring" system is similar to the system used in the VRSC™ transmission and it slides on the shafts to mate into the gears. This eliminates sliding heavy gears to accomplish the shift and results in smooth, precise and light effort shifting. Sixth gear is a true overdrive, at a .89:1 ratio and the first five gears mimic today's proven 5-speed ratios. The overdrive feature allows you to run a lower engine RPM in sixth gear, at any given road speed. Lower RPM can result in lower vibration, longer engine life and smoother cruising. The Screamin' Eagle 6-Speed Transmission is available as a complete transmission or as a replacement gear set and can be matched with hydraulic or cable-operated clutch controls.

Screamin' Eagle 6-Speed Transmissions feature forged chrome "trap door," forged shifter forks and forged and precisely ground gears. No speedometer or exhaust mount modifications are required. Complete transmissions are ready to install into the chassis and the 6-Speed Gear Set Kits are designed to replace the stock gear set without removing the transmission. Gear Set Kits require slight modification (template included) to the Original Equipment transmission case and include all necessary installation hardware.

SHORT & LONGBLOCK PROGRAM

When it comes time to repower your motorcycle, the first stop should be your local Harley® dealer. They can set you up with a replacement short block or long block engine that is manufactured from 100% new Original Equipment parts and subjected to the same rigorous testing as all Harley engines. Plus, all long block engines feature a one-year factory warranty and your original VIN stamped on the case.

A. TWIN CAM SHORTBLOCK ASSEMBLY – DYNA AND TOURING

Kit includes current spec Original Equipment cam plate, oil pump, cam drive components and the gaskets, seals and most of the hardware required to complete the engine and install it (not all components shown). You select your cylinders, heads, cams, covers and other top-end components. Choose one of the Screamin' Eagle® Stage kits to incorporate reliable performance and pick from our decorative engine covers to customize the look. HARLEY-DAVIDSON® LONGBLOCK PROGRAM

Your engine is the heart and soul of your Harley-Davidson® motorcycle. When the miles start to add up, a Harley-Davidson LongBlock can put the rumble back in your ride simply, quickly, and affordably.

WHY SHOULD I CONSIDER A LONGBLOCK? Unlike an engine rebuild from the repair shop down the street, the Harley-Davidson® LongBlock is manufactured from 100% new Original Equipment components, and is built to the latest factory specifications. Engine includes upgraded Screamin' Eagle® lefty crankcase bearing, Screamin' Eagle cam bearings and Screamin' Eagle performance tappets to handle higher stress loads and performance upgrades. In addition, '99-'06 LongBlocks are upgraded with late-model hydraulic cam tensioners, high-volume oil pump and billet cam plate. '07-'16 103CI and 110CI engines feature factory-installed Automatic Compression Releases.

WHAT DOES THE H-D® LONGBLOCK INCLUDE? The crankcase is pre-assembled with flywheels, connecting rods, bearings, seals, cylinders, pistons, rings, heads, valves, valve springs, tappets and pushrod covers. Also included and ready for Dealer installation are top end rocker arm supports, rocker arms and shafts, pushrods, and breathers. The LongBlock also includes cam support plate, cam plate bearings, cam and timing chain drive, hydraulic tensioners and all required gaskets and new hardware.

ARE UPGRADES AVAILABLE?* You can choose silver or black-highlighted engines to match your styling direction. Bikes originally equipped with Twin Cam 88® engines can upgrade to 95 or 103CI displacement, and Twin Cam 96™-equipped models can be repowered with 103 or 110CI engines, based on specific model fitment. Upgrades require model-specific ECM recalibration (sold separately). Only available in North America.

WHAT ELSE DO I NEED? LongBlock is sold without cam shafts, lower rocker boxes, upper rocker box covers, or cam cover. You have the option to re-install your current cams and covers, or select from a wide assortment of performance and custom engine cover options.

FAST AND EASY: Just take your Harley® motorcycle to your authorized dealership. They will remove the engine from the frame, ship the left crankcase half to Harley-Davidson, and in a short time, you will have a new LongBlock back, ready for the dealer to reinstall in your bike. Your engine retains its original Vehicle Identification Number (VIN) for easy title exchange and registration.

**Displacement upgrades are available for vehicles previously equipped with street compliant big bore kits only.*

Derby, Timer & Air Cleaner Covers

A. BRASS COLLECTION

The authentic alternative to the typical chrome-covered or blacked-out look, the Harley-Davidson® Brass Collection delivers a warm, hand-crafted look to your custom ride. These minimalistic living finish components make a garage-built styling statement and are the ideal addition to your stripped-down bobber or café motorcycle. Artistically manufactured from solid brass, these components feature a natural antique finish that will age and patina when exposed to the elements. Unlike bright polished and plated brass trim, these heritage-finished components are subtle additions to your ride and don't compete for attention with the rest of the bike. Brass Collection components are factory treated with wax to slow the aging process, and are shipped with cleaning and care instructions.

CONTROLS

The most visual contact point you have with your motorcycle is where your hands and feet meet the controls. Choose a handlebar suitable for your physical needs. Then select grips, hand controls, footpegs and mirrors to underscore the style of your ride.

TOUCH POINTS

From a rider's perspective, the controls are one of the most visual parts of the bike. They are the first thing you touch when you drop into the saddle, and what you see every mile you ride. That makes your controls a prime candidate for special treatment. Styled to put an integrated look just a few wrench turns away, installing one of our hand and foot control collections is a solid first step to an all-out custom journey.

BRASS COLLECTION
The authentic alternative to the typical chrome-covered or blacked-out look, the Harley-Davidson® Brass Collection delivers a warm, hand-crafted look to your custom ride. These minimalistic living finish components make a garage-built styling statement and are the ideal addition to your stripped-down bobber or café motorcycle. Artistically manufactured from solid brass, these components feature a natural antique finish that will age and patina when exposed to the elements. Unlike bright polished and plated brass trim, these heritage-finished components are subtle additions to your ride and don't compete for attention with the rest of the bike. Brass Collection components are factory treated with wax to slow the aging process, and are shipped with cleaning and care instructions.

HEATED HAND GRIPS
Keep comfortable on those cool mornings or frigid night rides. Warm hands have a major impact on overall body comfort and sometimes gloves just aren't enough. These thermostatically controlled grips feature variable heat settings controlled with a military grade resistor and use automatic temperature monitoring to adjust to ambient temperatures. With both hands on the grips, they will remain at a constant temperature regardless of changes in outside temperature. The self-contained control circuit and control knob means you have no additional switches or controller boxes to mount and the grips are switched on/off with the ignition to avoid draining your battery. The glueless grip design allows grip removal if you change handlebars or motorcycles.

These grips combine a traction-grip crosshatch rubber surface with a comfortable 1.6" diameter for excellent control in wet or dry weather. COMFORT, STYLE OR BOTH?

Every person is unique. Your overall height, arm reach, upper body length and riding style all dictate your relationship to the bike's controls. Add in the desire for a unique, custom look and your handlebar options multiply exponentially.*

YOUR RIDING POSITION

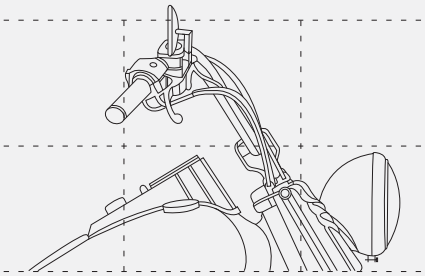

DRAG HANDLEBAR*

Narrow, flat and more aggressive, drag bars provide a straight elbow and neutral hand and wrist position. For maximum comfort, drag bars can be positioned with curved or straight risers to minimize stretch to the controls.

BEACH HANDLEBAR*

Low and wide, a beach bar spreads your arms and gives you room to breathe. Ideal for the rider with long arms, beach bars can be a little too wide for many riders. While selecting a bar, make sure you can reach the hand controls when the handlebar is fully turned.

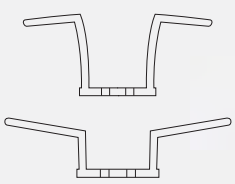

APE HANGER & TALLBOY® HANDLEBAR*

Tall and wide, ape hanger and Tallboy® handlebars provide a classic "fists-in-the-wind" look and can add long-haul comfort for riders with long arms. Because handlebar height is regulated in many areas, check local laws before installing a tall handlebar.

CHIZELED HANDLEBAR*

For cutting edge style, a Chizeled Bar combines the hands-up feel of a mini-ape with the narrow width of a drag bar. The bar's shoulder-width design keeps the elbows in and the arms straight ahead, and the wrist and hands fall in a neutral palms-down grip.

CHOOSING YOUR HANDLEBAR

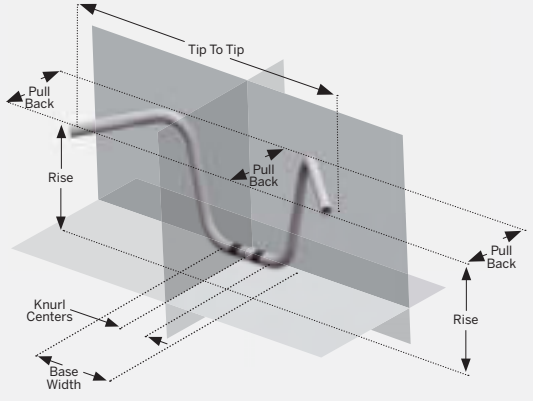

RISE is the vertical distance between a handlebar's tip and its base.
Adding risers to bars that sit too low can help put hand grips into your sweet spot.

PULL BACK is the distance the handlebar tips come back toward the rider.
Greater pull back can eliminate the long reach to the bar for a shorter rider.

WIDTH is measured from tip-to-tip. Make sure the bar isn't too wide
so it pulls your hands off the grips when turning.

KNURL CENTER is the distance between the center line of the bar's knurling.
The measurement should match the riser dimension to maximize clamping pressure.

*NOTE: Installation of some handlebars and risers may require a change in clutch and/or throttle cable and brake lines for some models. Handlebar height is regulated in many areas. Check local laws before installation. **1.25" Fat Bar base necks down to fit 1.0" handlebar clamp.

Handlebars – Dyna®/Softail®

A. EXTREME REACH® HANDLEBAR*

Extensively tested with a panel of riders between 5'-0" to 5'-5" tall, this Extreme Reach® Handlebar and recommended riser combination was proven to be the most ergonomically pleasing handlebar for many Dyna® and Softail® models. Shaped to provide the ideal balance of pull back and width, this handlebar produces an overall pull back of 11.0" and a tip-to-tip width of 30.0" when combined with Curved Riser Kit P/N 56266-09 (sold separately). Your hands fall naturally in place and the narrow width reduces your stretch while making low-speed turns and parking lot maneuvers.

55800563

Fits '06-'17 Dyna (except '14-'17 FXDL) and '00-'17 Softail models (except FLSS, FLSTFBS, FXCW, FXCWC, FXS, FXSB, FXSTD and Springer™). Does not fit CVO™ models. All models require separate purchase of additional installation components.

See your Dealer for cables, lines and additional installation components required, or visit www.H-D.com/store and search part number 55800563.

B. REACH HANDLEBAR* – 1.0"

Recommended for riders between 5'-2" and 5'-8" tall, this Reach Handlebar is shaped to position the hand controls closer to the rider for optimized elbow and wrist position. Designed to provide the ideal balance of pull back and width, this handlebar allows your hands fall naturally in place. The narrower width reduces your stretch while making low-speed turns and parking lot maneuvers, and the overall effect is improved confidence and long-range comfort for short-armed riders.

Fits '18-later FLDE, FLHC, FLHCS, FLSL, FXBB and FXLR models. All models require separate purchase of additional installation components.

CHOOSE YOUR BATWING HANDLEBAR
Just about every model of Harley-Davidson® motorcycle features a different stock handlebar. Selected to complement the style or use of the bike, the handlebar may be the ideal shape for many riders, but of course, not everyone has the same physical characteristics.

Choosing a bar for your batwing fairing-equipped model is about more than just style – it's about how you approach the road. Where the bar positions your hands, wrists, and arms directly affects how you feel on your motorcycle. For every set of bars, there are three factors at work: rise, pullback and width. These three measurements determine your reach to the hand controls and, therefore your overall feeling of comfort and control.

A. ELECTRA GLIDE® CHROME HANDLEBAR*
Replace your stock polished bar with this 1.0", chrome handlebar that allows you to tuck the wires inside the bar for a clean, finished look. HANDLEBAR RISERS

You may think you are perfectly happy with the way your bike is adjusted. But that doesn't mean that it is correctly set up for you. We get used to our bikes—our muscles become trained and we end up accommodating the bike. It is far better to take the time to make the bike accommodate you. If you are satisfied with your handlebar's width and wrist position, but wish it was just a little higher, lower or closer to you, your dealer can recommend a set of handlebar risers that move the bar into your comfort zone.

ADJUSTING YOUR HAND POSITION

STOCK HANDLEBAR

Just about every model of Harley-Davidson® motorcycle comes with a different stock handlebar. Selected to complement the style of the bike, the handlebar may be the ideal shape for many riders, but of course, not everyone has the same physical characteristics.

STOCK HANDLEBAR WITH RISERS

If the stock handlebar has the correct width and hand position for you, but seems just a little too far away, we offer riser kits that bring the controls within reach. Straight and curved risers are available for many model and handlebar combinations.

G. SOFTAIL SLIM® PULL BACK RISER KIT*

Ideal for riders with a short reach or for those that prefer an upright riding position, these curved risers and the matching handlebar clamp are shaped to put the Original Equipment Softail Slim® handlebar closer to the rider. Designed for easy installation, these 4.5" high risers are compatible with the stock control cables for a low-cost conversion. Provides 1.75" of rise and 1.5" of additional pull back when compared to the stock FLS riser.

Fits most '12-'17 FLS and FLSS and '18-later FLSL models with no additional components. '15-'17 FLS and FLSS models equipped with ABS brakes require separate purchase of Brake Line P/N 41800300. Also fits most 1.0" diameter handlebars with separate purchase of additional components. Does not fit Springer™ models. Riser height 4.5".

H. HANDLEBAR RISER KITS – CHROME*

These chrome-plated risers provide a comfortable riding position for those who like the shape, width and hand position of their current 1.0" handlebar, but wish it was closer. For an ergonomically-friendly ride, these risers can be combined with a Harley-Davidson® Reach® forward-position seat and Profile® Low suspension components to reduce arm stretch and to plant the feet firmly on the ground. Finish off the look with a Harley-Davidson decorative handlebar clamp kit.

Fits most 1.0" handlebars. Does not fit FXBB, FXBR, FXBRS and Springer models. Installation may require separate purchase of handlebar clamp. See your dealer for details. Installation also may affect fitment of handlebar-mounted instruments.

A. BOOM!™ AUDIO AMPLIFIER KIT

Take your music to the streets. Boom!™ Audio Amplifier Kits allow you to crank up the volume with significantly less distortion. The amplifier provides more power than Original Equipment radio alone, resulting in increased volume, fuller sound reproduction, reduced clipping and lower Total Harmonic Distortion (THD) than head unit alone. Unlike aftermarket amplifiers that connect between the radio and the speakers, the Boom! Audio amplifier bypasses the radio's internal power amp to produce the cleanest sound possible. The Boom! Audio Amplifier boosts the pure source signal, minimizing any distortion generated through the speaker output. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response and the strong midrange response cuts through wind and road noise. The marine grade 4-channel, 75-watts/channel amplifier (300-watt total) has been designed from the ground-up for the harsh motorcycle environment. Fairing Mounted kit includes all mounting hardware and wiring harness. Note: The use of the Boom! Audio Amplifier turns off the radio's internal amplifier.

BOOM!™ AUDIO STAGE II COMPONENTS*
Headline your own concert tour. Big and bold is the best way to describe the musical performance you will experience when listening to your favorite band through a Boom!™ Audio Stage II sound system. The weather-proof 3-way speakers feature high-excursion woofers for extended bass performance, and separate mid- and high-frequency drivers for rich vocals and startlingly real treble notes. Powered by a dedicated 300 watt RMS amplifier, each pair of speakers is capable of producing "filling-rattling" volume. Designed to work seamlessly with the factory installed Boom! Audio infotainment head unit, the Boom! Stage II components are system matched and feature custom tuned static and dynamic equalization that dial in the ideal setup for your ride. And you can choose how far you want to go. From a single pair of fairing mounted speakers and a 300 watt amp to a full bore 8 speaker, 4 amp, 1200 watt system, we've got you covered.

A. BOOM! AUDIO AMPLIFIER KIT
Take your music to the streets. Boom! Audio Amplifier Kits allow you to crank up the volume with significantly less distortion. The amplifier provides more power than Original Equipment radio alone, resulting in increased volume, fuller sound reproduction, reduced clipping and lower Total Harmonic Distortion (THD). Unlike aftermarket amplifiers that connect between the radio and the speakers, the Boom! Audio amplifier bypasses the radio's internal power amp to produce the cleanest sound possible. The Boom! Audio Amplifier boosts the pure source signal, minimizing any distortion generated through the speaker output. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response and the strong midrange response cuts through wind and road noise. The marine grade 4-channel, 75-watts RMS/channel amplifier (300-watt RMS total) has been designed from the ground-up for the harsh motorcycle environment. Fairing Mounted kit includes all mounting hardware and wiring harness. Note: The use of the Boom! Audio Amplifier turns off the radio's internal amplifier.

And because your bike's Advanced Audio Radio is designed for plug-and-play integration of Boom! Audio equipment, you can easily create the custom sound experience you've always wanted.

FAIRING SPEAKERS

Capture every note. Designed for maximum performance in the harsh motorcycle environment, these waterproof two-way speakers feature increased sensitivity for 25% louder output, reduced distortion and improved clarity at speed.

AMPLIFIERS

When loud just isn't loud enough. Rugged Fairing, Tour-Pak® and Saddlebag-mounted amplifiers provide increased volume, lower distortion, reduced clipping and fuller sound that cuts through wind and road noise.

IPOD® INTERFACE

Access your iPod® playlists, artists, songs and albums while you keep your hands on the handlebar. At the touch of your fingertips, you can use the factory audio hand controls to scan through the iPod menus and view the selections on the radio face.

FAIRING LOWER SPEAKERS

Nestled into the glove boxes of your vented fairing lowers, these vibration-tested waterproof two-way speakers feature rider directed tweeters for clear, crisp sound.

BASS BOOST PORTS

Boost bass response without adding a subwoofer. The open ports permit the rear speaker pods to "breathe," using the Tour-Pak air space for a 21% increase in bass response and an 82% reduction in distortion.

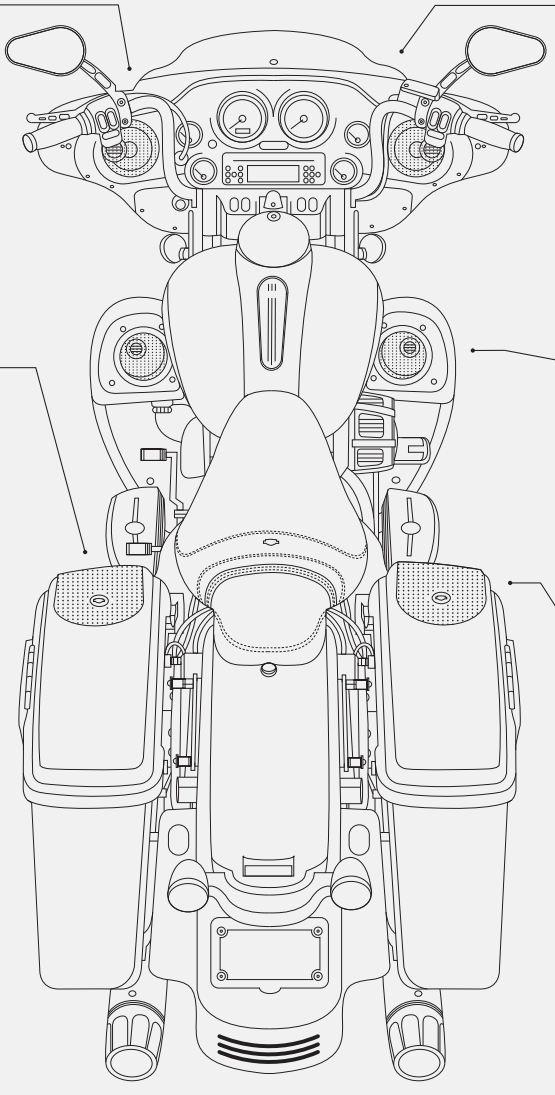

SADDLEBAG LID SPEAKERS

Directionally optimized for improved rider acoustics, these waterproof 5" x 7" two-way speakers turn the latched and gasket-sealed saddlebags into large speaker enclosures for enhanced bass response.

BIKE-TO-BIKE COMMUNICATIONS KIT

Bike-to-Bike system allows you and your passenger to talk with other riders, even when you are miles apart. Integrated CB features easy to use handlebar controls and will mute the radio while in transmit or receive mode.

Two-way speaker design with separate full-range element and grill-mounted tweeter provides improved high-frequency response that helps cut through the road and wind noise. Increased speaker sensitivity provides louder output than Original Equipment speakers and the leading competition at the same volume setting, resulting in reduced distortion for improved clarity at speed. Vibration-tested 5.25" waterproof speakers feature injection-molded woofer cones with a high-flux Neodymium magnet and are sized to be a direct replacement for the factory speakers with no modification to the speaker housing. Complete kit includes two-way speaker design with separate custom grill-mounted tweeters, electronic crossovers and plug and play wiring connections. Boom! WIRELESS COMMUNICATION

Riding alone is a good way to unwind and clear your head. But if you've got a passenger, or you're riding with a group, inevitably you'll need to communicate with others. A tap on the helmet, a hand signal or frantic waves only get you so far. Welcome to Boom!™ Audio wireless Bluetooth® technology.

Boom! Audio Bluetooth headsets allow riders and passengers to connect on the open road. These comfortable headsets permit a number of riders to pair into the network and "rebroadcast" signals up and down the line to extend the effective range. In addition to driver-to-rider intercom and bike-to-bike communication, these wireless headsets let you connect to cell phones, GPS devices, and personal music players.

The total distance increases as the number of riders increase, but the distance between each rider decreases as you add additional riders to the communication chain. Rider-to-rider connectivity may vary depending on terrain and traffic.

A. WIRELESS HEADSET INTERFACE MODULE

It's time to cut the cord with your bike. Now available for '14-later Touring and Trike models equipped with Boom!™ Audio 6.5GT Radios, this Wireless Headset Interface Module (WHIM) lets you communicate with your bike without being wired to it. The WHIM Bluetooth adapter permits wireless connectivity to the 6.5GT infotainment system, allowing you to communicate via CB radio, hear turn-by-turn GPS directions, listen to your favorite radio stations and so much more all through your Bluetooth®-enabled headset.

Blueooth Wireless Technology
Wireless interface permits full access to the Infotainment features without the hassle of being connected to the bike. You have full freedom of movement for turning your head and getting off the bike at fuel stops.

Integrated Into the 6.5GT Radio
Seamlessly use all wired headset functionality (CB, Phone, Intercom, Navigation, Radio) without the compromises of aftermarket systems, and configure your Boom! Audio 20S headset directly from the radio controls.

Superior Audio Quality
Harley-Davidson® headsets feature proprietary software that delivers superior audio quality with stereo output compared to non-Harley® headsets which provide a mono sound output.

Dual Headset Connectivity
Two Bluetooth-enabled headsets can be connected to one WHIM, simplifying installation and keeping costs in line.

Integrated Behind the Fairing
Module mounts behind the fairing and connects directly to the radio, eliminating external wires and connections to console and Tour-Pak communication ports.

Compatible with H-D® Wireless Headsets
Current H-D® wireless headsets are completely compatible. No need to purchase new headsets to use the WHIM system. Harley headset volume can be adjusted from the motorcycle hand controls.

Impact of Retrofit on Wired Microphone Functionality
Upon installation of the WHIM, your mororcycle's wired microphone functionality will no longer be available. However, wired audio will continue to function as before.

WHEELS

Make a definitive style statement. Whether you're going for an old-school or new-school look, this is where you set the tone. You'll ride comfortably knowing that Harley-Davidson® wheels meet the highest standards of performance and durability.

WHEEL FINISH OPTIONS

SELECT A FINISH TO MATCH YOUR STYLE

MIRROR CHROME

Looking for the ultimate flash? Choose Mirror Chrome wheels. To achieve this rich look, our dedicated team of polishers spends hours preparing the wheel for its finish. All visible wheel surfaces are micro-polished to a glass smooth finish, and special masking is applied to prevent contamination to threads and bearing bores.

CONTRAST CHROME

Can't make up your mind? Choose Contrast Chrome wheels. We start with a hand polished wheel, and add a proprietary finish that features both gloss black paint and chrome highlights. The combination produces a stunning contrast that lightens the wheel's profile by visually thinning the spokes, rim and hub.

GLOSS BLACK

Want a sinister look? Choose Gloss Black. First, we polish all the surfaces. Then we apply the rich coating for a finish with incredible depth and shimmer. The all-black spoke and rim blend with the tire sidewall to deliver a massive profile on a blacked-out bike, but the deep gloss surface holds its own in the company of chrome.

WHEEL CARE

The road provides plenty of nasty elements that can be potentially damaging to the finish of motorcycle wheels. Harley® Wheel & Tire Cleaner safely removes brake dust and road grime from wheels, tires and whitewalls in seconds. Just wet the wheel, spray on Wheel & Tire Cleaner, work it into tight areas with a Spoke Brush, and rinse away the dirt.

WHEEL ORDERING PROCESS

STEP ONE

Select a wheel part number for your specific fitment.

STEP TWO

Select the wheel installation kit for your specific application (model, year, and front or rear). Note: If your model is not specified in the wheel fitment, a wheel installation kit will not make the wheel fit your model.

STEP THREE

Refer to the instruction sheet included in your wheel kit to determine the necessary parts required from the installation kit.

STEP FOUR

Use only Harley-Davidson specified tires. See a Harley-Davidson® dealer. Using non-specified tires can adversely affect stability, handling or braking, which could result in death or serious injury.

C. CUSTOM STRETCHED SIDE COVERS – VIVID BLACK

C. CUSTOM STRETCHED SIDE COVERS – HOT ROD RED FLAKE

C. CUSTOM STRETCHED SIDE COVERS

Add a long, lean look to the profile of your Touring bike. These Stretched Side Covers are sculpted to smooth the visual transition from the side of the bike to the front of the saddlebag, and trade the traditional stepped look for a rearward flowing design. Shaped to flare out and down the saddlebag face, the sleek side covers complement the body lines and eliminate the saddlebag guard clearance notch at the lower corner for a seamless flow. And unlike some aftermarket designs, these side covers fit without significantly compromising the available passenger foot space. The one-piece covers are a snap-in replacement for the Original Equipment covers, and require no bonding or modification for installation. Available in Color-Matched, Vivid Black or primed and ready-to-paint finish.

Fits '14-later Touring models. Does not fit with Auxiliary Power Port P/N 69201099.

A. COLOR-MATCHED CAFÉ CUSTOM TAIL SECTION

Create your own link to the Sportster®-based racing and performance bikes of the '60s and '70s. This fast-back solo seat and tail section mirrors the look and feel of the iconic 1977-78 Harley-Davidson® XLCR Café Racer model, and re-imagines the style for the modern era. Ideal for use with Clip-On or Sportster Clubman Handlebars and mid- or rear-set foot controls, this seat provides the perfect lay-down aggressive riding posture for splitting lanes or carving corners. The seat's upturned tail and longer nose positions the solo rider closer to the tank for better weight balance, quicker steering and added front-end feedback. The Tail Section is a true bolt-on design that wraps the fender struts, so unlike other café bike kits, there is no cutting, welding or frame modifications required. Installation is reversible – you can return easily your bike to the stock look. The complete kit features a sweeping composite tail section with a steel inner support, a deep solo bucket seat with backstop pad, and all necessary installation hardware.

Fits '10-later XL883N, XL1200CX, XL1200N, XL1200NS, XL1200V, XL1200X and XL1200XS models. Separate purchase of License Plate Bracket Kit P/N 67900360 for Canada models or P/N 67900359 for HDI models is required.

B. H-D FACTORY SECURITY SYSTEM – '06-EARLIER MODELS

Equip your '06-earlier Harley-Davidson® VRSC™, Sportster®, Dyna, Softail or Touring model with the security system designed and approved by The Harley-Davidson Motor Company.

When armed, the Security System disables the starter and ignition while monitoring the electrical system and vehicle motion with adjustable sensitivity. Minor disturbances trigger a momentary warning; major ones, an unbroken thirty-second alarm, after which the Security System returns to monitoring. A distinctive four-way flasher pattern is the alarm signal. An optional self-powered Smart Siren Kit adds a piercing scream that sounds even if the battery cable is cut.

The Security System is armed and disarmed with a remote control waterproof key fob utilizing state-of-the-art rolling code technology. If the key fob is not available, the rider may arm or disarm the system by keying a previously entered personal code on the turn signal switches. Kit includes 1 Key Fob.

BODYGUARD IN A BOTTLE

Oil is the lifeblood of your engine. It not only lubricates the moving parts, it cools, cleans, and flushes away all the byproducts of combustion. It lives in an environment filled with heat, friction, and toxins that are determined to break it down and shorten its useful life. And it keeps the heart of your motorcycle beating at idle or at full throttle. Harley-Davidson's complete line of lubricants are formulated specifically to keep your motorcycle running strong, mile after mile.

ENGINE OIL FAQ'S

What's in a bottle of oil?
- The Base Stock makes up 75-80% of a bottle of oil. Generally, if it comes from the ground, it is a Mineral Oil. And if it is made in a lab or a reactor, it is Synthetic Oil.
- The Additive Pack makes up the remaining 20-25%. These are the ingredients that make oil smarter and tailored to it's application. The additives include:
  - Viscosity Modifiers – lets oil flow like 20 weight oil at start-up and 50 weight oil at operating temperatures
  - Detergents – cleans inside your engine
  - Dispersants – suspends contaminants in the oil so they can be carried to the filter
  - Buffers – neutralizes acids that form in your engine
  - Anti-oxidants – prevents sludge and oil thickening oxidation
  - Corrosion inhibitors – protects internal components from corroding
  - Anti-wear additives – provides protection against internal wear

How often should I change my motorcycle engine oil?
You should change your motorcycle engine oil and engine oil filter at the first 1,000-mile service interval and at every 5,000-mile service interval thereafter. If you ride your motorcycle hard, under dusty conditions, or in cold weather, the engine oil and filter should be changed more often. You should always change your engine oil and filter prior to winter storage (or any extended storage) so that your engine oil is clean and free of contaminants during this time period.

What viscosity grade should I use in my Harley Motorcycle?
The recommended viscosity grade for all temperature conditions is SAE 20W50 Harley-Davidson® Motor Oil. The SAE 50 H-D® Motorcycle Oil is satisfactory in ambient temperatures of 60-80°F, and the SAE 60 H-D Motorcycle Oil in ambient temperatures above 80°F. SAE 20W50 covers the broadest range of operating temperatures.

What's the difference between synthetic and petroleum-based lubricants?
Group I, II and III petroleum-based lubricants are derived from oil pumped from the ground. Group IV and V synthetic lubricants are chemically produced in a lab. Petroleum-based lubricants inherit physical components (including contaminants) of the source crude oil in the refining process, while synthetic lubricants are custom-formulated to have desired properties for specific purposes, meaning that engineers have complete control of the lubricant from start to finish – at the molecular level.

What's better in my bike – Petroleum or Synthetic?
Petroleum lubricants have been around for a long time, and are effective at lubricating in most conditions, but mineral oil can't compete with the purity of synthetic lubricants—especially in extreme conditions. Synthetic oil does a better job reducing wear and resisting breakdown under a wider range of operating temperatures.

What does SYN3® full Synthetic Motorcycle Lubricant do for my drivetrain?
SYN3® Full Synthetic Motorcycle Lubricant offers all the benefits of Genuine Harley-Davidson 360 Motorcycle Oil, and:
- Offers superior wear protection at higher temperatures
- Keeps engines, transmissions and primary chaincases cleaner
- Meets the anti-wear lubricity requirements of all transmission gears
- Lubricates all primary chaincase components
- Delivers smooth, sure clutch operation
- Provides long-term protection of all internal components
- Improves seal and gasket performance
- Offers superior performance in high-output engines

What makes Harley SYN3 better than other Synthetics for my Harley?
SYN3 is pure, genuine, full synthetic lubricant.
- SYN3 base stocks are synthesized materials - including Poly Alfa Olefin (PAO) and Esther, which are the most pure, highest quality synthetic base stocks available
- SYN3 has the smartest, most robust additive package developed specifically to provide maximum performance and protection in H-D powertrains

Beware...not all synthetics are created equal.
- Due to a legal loophole, other brands are selling "Highly Refined Group III" mineral oil as synthetic oil
- Head to head, SYN3 outperforms these oils

SYN3 is a product you can trust, from a brand you can trust. Oil is the lifeblood to your Harley-Davidson; don't take chances with anything else.

Why should I use H-D® oil in my Harley?
- No one tests as much as we do – we test on the road, on dynos, and in the laboratory
- We accumulate millions of testing miles on our engines and drive trains, using only H-D Oil
- We test in the harshest environments – testing is performed in the extreme heat of the desert
- We test under the most rigorous duty cycles – accelerated durability testing helps explore the limits of our designs, in less time. This is a worst case scenario for oil
- We run thousands of hours on dynos
- We test in the laboratory – sampling and analyzing oil to determine its life and effectiveness during use

H-D's additive package is the best available, it's the most robust, it was created exclusively for H-D powertrains, and we are the only ones who have it.

Spark Plugs

A. SCREAMIN' EAGLE® PERFORMANCE SPARK PLUGS

Screamin' Eagle® Spark Plugs feature double platinum coating for superior erosion resistance and extended life. The "V" trimmed ground electrode reduces shrouding of the flame front to promote flame propagation, and the fine wire center electrode enhances startups and ignitability. Screamin' Eagle Plugs feature Ribbed Core Technology (RCT) that provides resistance to fouling, and are designed with Original Equipment-style noise suppression to prevent electrical interference with radios and CB communication equipment. Works great in racing applications where rich air/fuel conditions are required. Unique style with Screamin' Eagle logo. Sold in pairs.

Standard Compression Applications

Designed for modified engines including performance carburetors, high-flow air cleaners, camshafts, exhaust systems and ignition systems in conjunction with stock compression ratios.

B. HARLEY-DAVIDSON® GOLD SPARK PLUGS

A special thread and shell coating ensures quick and easy removal from aluminum heads and resists corrosion. A gold palladium insert extends life and improves resistance to corrosion. The tapered tip provides better spark exposure to air/fuel mixture and allows the mixture to flow more easily through gap area for maximum combustibility. Fouling resistance is improved with smaller diameter center electrode wire and insulator tip. Plus, a copper-cored ground electrode runs cooler for extended life.

Tire Inflators

A. TIRE PRESSURE GAUGE AND FILL VALVE

Simplify checking the air pressure level and filling the tires on your motorcycle. This Tire Pressure Gauge features an 18" flexible hose and 2-way air chuck with both a 45° fill port and a unique side fill port that provides easy straight-in access to hard-to-reach motorcycle valve stems. The dual-range instant-read gauge measures pressures from 0-60 psi and 0-400 kPa, and is protected from impact and abrasion by a thick rubber collar. Designed to fit an air compressor with a standard 1/4" quick-disconnect coupler, this gauge allows you to check the pressure and fill the tire without removing the chuck from the tire. Just apply the chuck to the valve stem, read the pressure, and add air by depressing the comfortable trigger leaver. And for checking tire pressure on the road, you can use this tool like any standard tire gauge.

B. COMPACT AIR COMPRESSOR WITH LIGHT

Correct tire pressure is crucial to safe operation and long tire life, but checking the pressure, finding a gas station with a working air pump, and filling the tire is a chore that many of us ignore. The Compact Air Compressor is designed to simplify this necessary procedure. The compact, lightweight 12V pump is designed for life on the road. The all-in-one pump plugs into your bike's battery charging harness, and features a built-in 0-160 psi pressure gauge and bright LED work light. The 11" air hose and 6' fuse-protected power cord easily reach the front and rear wheels, and are stored in convenient compartments when not in use. The lightweight pump features durable, impact-resistant construction, and is small enough to fit easily in a saddlebag or strap-on luggage. Kit includes pump, valve stem extension, and nylon carrying bag.

C. VALVE STEM EXTENSION

Sometimes there's just not enough space around the tire's valve stem for the gas station air chuck and hose to reach. Brake rotors, sprockets and saddlebags get in the way and keep the air chuck from making an airtight seal. When that happens, this Valve Stem Extension provides easy access. Simply screw the extension in place on the stem, fill the tire to the proper pressure, remove the extension, and replace the valve stem cap. Then toss the extension in your saddlebag or tool roll for the next time.

42300009

D. COMPACT TIRE GAUGE AND TREAD DEPTH INDICATOR

Combination dial air pressure and tread depth gauge provides easy access to the valve stem. A durable internal diaphragm provides accurate air pressure readings with a dual range indicator for 0-60 psi and 0-400 kPa readings. The pressure relief valve is activated by a push button to eliminate inner gauge air pressure after use. The integrated tire tread depth gauge features a dual-range color-coded indicator, calibrated in 1/32" (0-14/32") and millimeters (0-11mm), for monitoring tread wear. A protective rubber boot covers the housing to protect the gauge from impact and abrasion.

Compact with braided stainless steel lead.

E. DIGITAL TIRE PRESSURE GAUGE

Back-lit Digital Tire Pressure Gauge is easy to read at any time of day. Providing accurate pressure readings in 0.50 psi increments up to 60 psi. Scale can be changed to read psi, bar, Kg or kPa pressure with the touch of a button. This versatile gauge features a 12" braided line and 90 degree angle chuck for easy access to valve stems, and a tough rubber jacket to protect the gauge from damage. Batteries are included.

75158-10

F. TIRE GAUGE AND TREAD DEPTH INDICATOR WITH EMBOSSED LEATHER POUCH

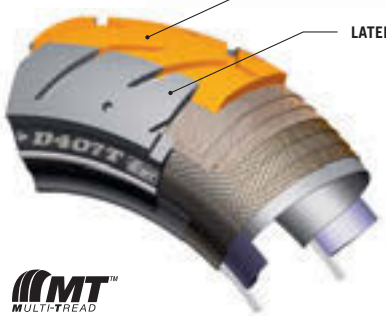

Chrome-plated steel gauge housing with Harley-Davidson script and 90 degree air chuck. Dual range indicator for air pressure and tire tread depth readings. Calibrated for 10-50 psi and 0-32/32" tread depth readings. Rotate the indicator shaft 90 degrees in the housing for 70-345 kPa and 0-30mm tread depth readings. Complete with a Bar & Shield logo embossed leather pouch.

ONE-YEAR OVER-THE-COUNTER PARTS AND ACCESSORIES WARRANTY

Harley-Davidson warrants that street legal Genuine Motor Parts ("Parts") and street legal Genuine Motor Accessories ("Accessories") that are purchased on or after January 1, 2012 through an authorized dealer will be free from factory defects, under normal use and service, for a period of one year starting from the date of retail sale and delivery (not date of installation). Because this limited warranty covers only Parts and Accessories, labor is not covered. This limited parts warranty does not cover defects or damage due to abuse, misuse or improper installation. This parts warranty applies to Parts and Accessories you or an aftermarket shop have installed, but only for defects in manufacturing — not conditions caused by the improper installation.

This Parts and Accessories warranty is separate and distinct from the limited factory warranty that applies to your stock motorcycle. This Parts and Accessories warranty does not extend or modify the factory warranty that applies to your motorcycle. It only covers the street legal Genuine Motor Parts and street legal Genuine Motor Accessories added to your motorcycle.

This Parts and Accessories warranty does not cover defects, damage or premature wear to your motorcycle that are caused by the installation or use of Parts and Accessories, even those installed by an authorized dealership. Examples include, but are not limited to performance-enhancing powertrain components or software, exhaust systems, non-approved tires, lowering kits, handlebars, add-ons connected to the factory electrical system, etc.

The fact that Parts or Accessories are labeled or branded Harley-Davidson, or are sold or installed by an authorized dealership, does not necessarily make them appropriate or warranted for the make and model of your motorcycle. The use of Parts and Accessories not designed and tested for your motorcycle may have negative consequences on the performance of your motorcycle and may create conditions not covered by the limited factory warranty.

The remedy for breach of this limited Parts and Accessories warranty is expressly limited to the repair or replacement of any component that proves to be defective, and does not extend or create liability for consequential damages, costs or expenses, including loss of time, inconvenience, or loss of use of the motorcycle. Any implied warranty, including warranty of merchantability or fitness for a particular purpose, is expressly limited to the duration of this limited one-year Parts and Accessories warranty, or to the shortest duration permitted by the laws in your state.

EXCLUDED COMPONENTS:
All Genuine Motor Parts & Accessories will qualify for the one-year over-the-counter warranty, with the following exceptions:

- Tires
- Chemicals
- Premium Luggage (two years)
- Audio and Navigation (two years where applicable)
- Non-street legal components (including Screamin' Eagle® Pro)
- Anything with a manufacturer/factory warranty
- Other disposable and consumable items

To obtain warranty service, return the affected component(s) with proof of purchase, at your expense, within the limited warranty period to an authorized Harley-Davidson® dealer.

Harley-Davidson Parts and Accessories Division, a facility of Harley-Davidson Motor Company, is registered to International Quality Standard ISO 9001:2015.

The sale or use of these parts or accessories does not grant the purchaser a license or other right under any Harley-Davidson patent.
